An acid is a compound that yields hydrogen ion (H⁺) in aqueous solution and a base is a compound that gives hydroxyl (OH⁻) ions in aqueous solution. As defined by Arrhenius, acid-base reactions are characterized by acids, which dissociate in aqueous solution to form hydrogen ions (H⁺) and bases, which form hydroxide (OH⁻) ions.

The general aim of this book is to present a practical, case-orientated approach to the analysis of acid-base problems in the clinical setting. Medical students, residents, fellows and attendings will find the book a required addition to their medical library.

Nucleic acids are the fundamental building blocks of DNA and RNA and are found in virtually every living cell. Molecular biology is a branch of science that studies the physicochemical properties of molecules in a cell, including nucleic acids, proteins, and enzymes. Increased understanding of nucleic acids and their role in molecular biology will further many of the biological sciences including genetics, biochemistry, and cell biology. Progress in Nucleic Acid Research and Molecular Biology is intended to bring to light the most recent advances in these overlapping disciplines with a timely compilation of reviews comprising each volume. * Provides a forum for discussion of new discoveries, approaches and ideas in molecular biology * Includes contributions from the leaders in the field * Has abundant references

Consists chiefly of reprints from various medical journals.
