The book is composed of two parts. The first part introduces the concepts of the design of digital systems using contemporary field-programmable gate arrays (FPGAs). Various design techniques are discussed and illustrated by examples. The operation and effectiveness of these techniques is demonstrated through experiments that use relatively cheap prototyping boards that are widely available. The book begins with easily understandable introductory sections, continues with commonly used digital circuits, and then gradually extends to more advanced topics. The advanced topics include novel techniques where parallelism is applied extensively. These techniques involve not only core reconfigurable logical elements, but also use embedded blocks such as memories and digital signal processing slices and interactions with general-purpose and application-specific computing systems. Fully synthesizable specifications are provided in a hardware-description language (VHDL) and are ready to be tested and incorporated in engineering designs. A number of practical applications are discussed from areas such as data processing and vector-based computations (e.g. Hamming weight counters/comparators). The second part of the book covers the more theoretical aspects of finite state machine synthesis with the main objective of reducing basic FPGA resources, minimizing delays and achieving greater optimization of circuits and systems.

The edited volume *Motifs in Language and Text* is the first collection of original research in the area of the

quantitative analysis of motifs. It hosts a collection of contributions that give insight to linguistic motifs theoretically across different languages, text genres, and structural levels, such as lexical, syntactic, semantic etc., and also to the tentative efforts upon the practical applications of the linguistic motifs. .

Dependency analysis is increasingly used in computational linguistics and cognitive science. Surprisingly, compared with studies based on phrase structures, quantitative methods and dependency structure are rarely integrated in research. This is the first book that collects original contributions which quantitatively analyze dependency structures across different languages and text genres.

Canada ' s automotive "Dr. Phil" says there ' s never been a better time to buy a new car or truck. For deals on wheels, 2013 will be a "perfect storm." There ' s never

been a better time to buy a new car or truck, thanks to a stronger Canadian dollar, a worldwide recession driving prices downward, and a more competitive Japanese auto industry that 's still reeling from a series of natural disasters. In addition to lower prices and more choices, 2013 car buyers will see more generous cash rebates, low financing rates, bargain leases, and free auto maintenance programs. Buy, sell, or hold? Which cars and trucks are "wallet-friendly" and can easily last 15 years? Which vehicles offer the most features to best accommodate senior drivers? Do ethanol and hybrid fuel-saving claims have more in common with Harry Potter than the Society of Automotive Engineers? Is GM 's 2013 Volt electric car destined to become an electric Edsel? These questions and more are answered in this informative guide.

WHAT WILL 2013 BRING? Many believe the world will end December 21, 2012. Is it true? When Mayan elders are asked about the end of their ancient calendar on that date, they simply smile and say, "It is the return of more light." In 2013 Mayan Sunrise, Sri Ram Kaa and Kira Raa take you from the peaks of Machu Pichu and the headwaters of the Ganges to the highlands of Guatemala and deep into the heart of Mayan culture. They pass along the wisdom of the high priests of the Maya, who are aware this is a hinge moment. In a time when the ecosystem is damaged beyond repair and with the world in crisis, the Maya know that a disruptive transition is near. They look to the beginning of a new era when humanity will return to a state of exquisite balance and harmony. As global chaos escalates toward the supposed end date, you have a choice--fear or awakening. Now is your opportunity:

- Are you aware

of the future? • How and where is your path ahead?  
• Are you open to trusting your inner wisdom? • Are you ready for your Mayan sunrise?
