I place Philippopoulos-Mihalopoulos' Absent Environments: Theorising Environmental Law and the City in the same category, not just because it represents another successful work of sustained theoretical analysis, but because it also gives a voice to one of the main concerns about environmental law that I have stumbled over in the course of my writing and teaching, but have failed to pursue so thoroughly, or so honestly: what do we mean by the 'environment' in environmental law ...

Offering a novel, transdisciplinary approach to environmental law, its principles, mechanics and context, as tested in its application to the urban environment, this book traces the conceptual and material absence of communication between the human and the natural and controversially includes such an absence within a system of law and a system of geography which effectively remain closed to environmental considerations. The book looks at Niklas Luhmann's theory of autopoiesis. Introducing the key concepts and operations, contextualizing them and opening them up to critical analysis. Indeed, in

contrast to most discussions on autopoiesis, it proposes a radically different reading of the theory, in line with critical legal, political, sociological, urban and ecological theories, while drawing from writings by Husserl and Derrida, as well as Latour, Blanchot, Haraway, Agamben and Nancy. It explores a range of topics in the areas of environmental law and urban geography, including: environmental risk, environmental rights, the precautionary principle, intergenerational equity and urban waste discourses on community, nature, science and identity. The author redefines the traditional foundations of environmental law and urban geography and suggests a radical way of dealing with scientific ignorance, cultural differences and environmental degradation within the

perceived need for legal delivery of certainty.

Environmental principles – from the polluter pays and precautionary principles to the principles of integration and sustainability – proliferate in domestic and international legal and policy discourse, reflecting key goals of environmental protection and sustainable development on which there is apparent political consensus. Environmental principles also have a high profile in environmental law, beyond their popularity as policy and political concepts, as ideas that might unify the subject and provide it with conceptual foundations or boost its delivery of environmental outcomes. However, environmental principles are elusive legal concepts. This book

deepens the legal understanding of environmental principles in light of recent legal developments. It analyses the increasing legal effects of environmental principles in different jurisdictions and demonstrates how they are shaping and revealing innovative and evolving bodies of environmental law. This analysis is a step forward in understanding a key feature of modern environmental law and presents a robust methodology for dealing with novel legal concepts in the subject. It also makes a contribution to environmental policy debates and discussions internationally that rely heavily on environmental principles, including their supposed legal effects.

This comprehensive Research Handbook offers an innovative

analysis of environmental law in the global South and contributes to an important reassessment of some of its major underlying concepts. The Research Handbook discusses areas rarely prioritized in environmental law, such as land rights, and underlines how these intersect with issues including poverty, livelihoods and the use of natural resources, challenging familiar narratives around development and sustainability in this context and providing new insights into environmental justice.

The Yearbook of European Environmental Law is a joint venture between leading academics, practitioners, and Community officials. Academics and students will find a wealth of information in the stimulating and clearly written articles. The well-

structured and reliable Annual Survey is specifically designed to provide easy access to the very latest developments in environmental law at the European level. Separate parts of the Yearbook are devoted to important policy documents and reviews of books.

This timely Handbook brings innovative, free-thinking and radical approaches to research methods in environmental law. With a comprehensive approach it brings together key concepts such as sustainability, climate change, activism, education and Actor-Network Theory. It considers how the Anthropocene subjects environmental law to critique, and to the needs of the variety of bodies, human and non-human, that require its protection. This much-needed book provides a

theoretically informed analysis of methodological approaches in the discipline, such as constitutional analysis, rights-based approaches, spatial/geographical analysis, immersive methodologies and autoethnography, which will aid in the practical critique and re-imagining of Environmental Law.

This expanded and updated Research Handbook delivers an authoritative and in-depth guide to the conceptual foundations of environmental law. It offers a nuanced reflection on the underlying principles by exploring issues such as human rights, constitutional rights, sustainable development and environmental impact assessment within the context of environmental law.

Focusing on paradoxes and tensions of European legal integration, this book investigates four complex and inherently contradictory processes to offer a new framework for understanding contemporary European integration. The volume features contributions from some of the biggest names in European legal philosophy, to include Neil MacCormick, Yves Dezalay and Bryant Garth, Pierre Legrand, Heikki Mattila and David Nelken.

This Handbook brings together 40 of the world's leading scholars and rising stars who study international law from disciplines in the humanities – from history to literature, philosophy to the visual arts – to showcase the distinctive contributions that this field has made to the study of international

law over the past two decades. Including authors from Australia, Canada, Europe, India, South Africa, the UK and the USA, all the contributors engage the question of what is distinctive, and critical, about the work that has been done and that continues to be done in the field of 'international law and the humanities'. For many of these authors, answering this question involves reflecting on the work they themselves have been contributing to this path-breaking field since its inception at the end of the twentieth century. For others, it involves offering models of the new work they are carrying out, or else reflecting on the future directions of a field that has now taken its place as one of the most important sites for the study of international legal practice and theory.

Each of the book's six parts foregrounds a different element, or cluster of elements, of international law and the humanities, from an attention to the office, conduct and training of the jurist and jurisprudent (Part 1); to scholarly craft and technique (Part 2); to questions of authority and responsibility (Part 3); history and historiography (Part 4); plurality and community (Part 5); as well as the challenge of thinking, and rethinking, international legal concepts for our times (Part 6). Outlining new ways of imagining, and doing, international law at a moment in time when original, critical thought and practice is more necessary than ever, this Handbook will be essential for scholars, students and practitioners in international law, international relations, as well as in law and the

Foundations contains a series of theoretical and applied perspectives on the connection between law and ecology, which together offer a radical and socially responsive foundation for environmental law. While its legal corpus grows daily, environmental law has not enjoyed the kind of jurisprudential underpinning generally found in other branches of law. This book forges a new ecological jurisprudential foundation for environmental law – where 'ecological' is understood both in the narrow sense of a more ecosystemic perspective on law, and in the broad sense of critical self-reflection of the mechanisms of environmental law as they operate in a context where

boundaries between the human and the non-human are collapsing, and where the traditional distinction between ecocentrism and

anthropocentrism is recast.

Addressing current debates, including the intellectual property of bioresources; the protection of biodiversity in view of tribal land demands; the ethics of genetically modified organisms; the redefinition of the 'human' through feminist and technological research; the spatial/geographical boundaries of environmental jurisdiction; and the postcolonial geographies of pollution – Law and Ecology redefines the way environmental law is perceived, theorised and applied. It also constitutes a radical challenge to the traditionally human-centred frameworks and concerns of legal

International Natural Resources Law,  
Society Investment and Sustainability provides  
a clear and concise insight into the  
relationship between the institutions  
that govern foreign investment,  
sustainable development and the rules  
and regulations that administer natural  
resources. In this book, several  
leading experts explore different  
perspectives in how investment and  
natural resources come together to  
achieve sustainable development in  
developing countries with examples  
from water, oil and gas, renewable  
energy, mineral, agriculture, and  
carbon trading. Despite varying  
perspectives, it is clear that several  
themes are central in considering the  
linkages between natural resources,  
investment and sustainability.

Specifically, transparency, good governance and citizen empowerment are vital conditions which encourage positive social, economic and environmental outcomes for developing countries. In addition, this book provides new insights into key concepts which underpin international law, including sovereign rights and state responsibility principles. It is clear from this book that in the attempt to reconcile these concepts and principles from separate legal regimes, complex policy questions emerge whereby it is difficult to attain mutually beneficial or succinct outcomes. This book explores how countries prioritise their policy objectives to achieve their notion of sustainable natural resource use, which is strongly influenced by power imbalances that inform North–South cooperation, as well as

South–South cooperation in the international investment regime. This book will be of great interest to students, academics and researchers of international environmental law, international human rights law, international investment law and international economic law. This book may also be of relevance to environmentalists, policy-makers, NGOs, and investors working in the natural resources field.
