Through this compelling book, you will gain new insight into how you can help drug abusers avoid contracting HIV/AIDS by discussing intervention methods that do not adhere to abstinence-based treatment models, such as reducing a stimulant binge by one day examining the dangerous effects that methadone clinics, who discharge patients for cocaine use, can have on the reduction of risk behaviors among heroine addicts discovering the correlation that exists between the fact that opioid-dependent individuals who have more drug and legal problems are at a higher risk for AIDS risk behaviors With Effects of Substance Abuse Treatment on AIDS Risk Behaviors, you will discover how stimulant drug treatment in itself represents a potentially powerful HIV prevention method by allowing the individual to make more thoughtful decisions regarding their sexual behaviors. Through this insightful volume, you will also learn essential information pertaining to different regions of the country, allowing you to effectively tailor your treatment program for your community. For example, in urban areas of the Western United States, the greatest risk of HIV infection is from non-injected stimulants.
