Andean peoples recognize places as neither sacred nor profane, but rather in terms of the power they emanate and the identities they materialize and reproduce. This book argues that a careful consideration of Andean conceptions of powerful places is critical not only to understanding Andean political and religious history but to rethinking sociological theories on landscapes more generally. The contributors evaluate ethnographic and ethnohistoric analogies against the material record to illuminate the ways landscapes were experienced and politicized over the last three thousand years.

The focus of this volume is the northern Titicaca Basin, an area once belonging to the quarter of the Inka Empire called Collasuyu. The recent explosion of archaeological projects around Lake Titicaca is reflected in the data-packed chapters of this new book. The original settlers around the lake had to adapt to living at more than 12,000 feet, but as this volume shows so well, this high-altitude environment supported a very long developmental sequence that climaxed in impressive villages with sunken courts, and towns and cities with fascinating sculptures and public buildings. The new data reported in this book come from a series of projects that will not only advance our understanding of sociopolitical evolution within Peru and Bolivia but well beyond. Every period, from the Early Archaic period onward, is becoming better known from the flurry of recent surveys and excavations. From this book, we learn a wide array of new things about key sites like Taraco, Pukara, Balsaspata, Qaluyu, Cancha Cancha Asiruni, Arapa, and Huancanewichinka. Lavishly illustrated and supplying data integral to understanding Andean prehistory, this is a must buy for Andeanists as well as others interested in the rise of sociopolitical complexity.

Perhaps the contributions of South American archaeology to the larger field of world archaeology have been inadequately recognized. If so, this is probably because there have been relatively few archaeologists working in South America outside of Peru and recent advances in knowledge in other parts of the continent are only beginning to enter larger archaeological discourse. Many ideas of and about South American archaeology held by scholars from outside the area are going to change irrevocably with the appearance of the present volume. Not only does the Handbook of South American Archaeology (HSAA) provide immense and broad information about ancient South America, the volume also showcases the contributions made by South Americans to social theory. Moreover, one of the merits of this volume is that about half the authors (30) are South Americans, and the bibliographies in their chapters will be especially useful guides to Spanish and Portuguese literature as well as to the latest research. It is inevitable that the HSAA will be compared with the multi-volume Handbook of South American Indians (HSAI), with its detailed descriptions of indigenous peoples of South America, that was organized and edited by Julian Steward. Although there are heroic archaeological essays in the HSAI, by the likes of Junius Bird, Gordon Willey, John Rowe, and John Murra, Steward states frankly in his introduction to Volume Two that “arch- ology is included by way of background” to the ethnographic chapters.

Constructions of Time and History in the Pre-Columbian Andes explores archaeological approaches to temporalities, social memory, and constructions of history in the pre-Columbian Andes. The authors examine a range of indigenous temporal experiences and ideologies, including astronomical, cyclical, generational, eschatological, and mythical time. This nuanced, interdisciplinary volume challenges outmoded anthropological theories while building on an emic perspective to gain greater understanding of pre-Columbian Andean cultures. Contributors to the volume rethink the dichotomy of past and present by understanding history as indigenous Andeans perceived it—recognizing the past as a palpable and living presence. We live in history, not apart from it. Within this framework time can be understood as a current rather than as distinct points, moments, periods, or horizons. The Andes offer a rich context by which to evaluate recent philosophical explorations of space and time. Using the varied materializations and ritual emplacements of time in a diverse sampling of landscapes, Constructions of Time and History in the Pre-Columbian Andes serves as a critique of archaeology’s continued and exclusive dependence on linear chronologies that obscure historically specific temporal practices and beliefs. Contributors: Tamara L. Bray, Zachary J. Chase, María José Culquichicón-Venegas, Terence D’Altroy, Giles Spence Morrow, Matthew Sayre, Francisco Seoane, Darryl Wilkinson

The Ancient Central Andes presents a general overview of the prehistoric peoples and cultures of the Central Andes, the region now encompassing most of Peru and significant parts of Ecuador, Bolivia, northern Chile, and northwestern Argentina. The book contextualizes past and modern scholarship and provides a balanced view of current research. Two opening chapters present the intellectual, political, and practical background and history of research in the Central Andes and the spatial, temporal, and formal dimensions of the study of its past. Chapters then proceed in chronological order from remote antiquity to the Spanish Conquest. A number of important themes run through the book, including: the tension between those scholars who wish to study Peruvian antiquity on a comparative basis and those who take historicist approaches; the concept of "Lo Andino," commonly used by many specialists that assumes long-term, unchanging patterns of culture some of which are claimed to persist to the present; and culture change related to severe environmental events. Consensus opinions on interpretations are highlighted as are disputes among scholars regarding interpretations of the past. The Ancient Central Andes provides an up-to-date, objective survey of the archaeology of the Central Andes that is much needed. Students and interested readers will benefit greatly from this introduction to a key period in South America’s past.

Flourishing from A.D. 1 to 700, the Recuay inhabited lands in northern Peru just below the imposing glaciers of the highest mountain chain in the tropics. Thriving on an economy of high-altitude crops and camelid herding, they left behind finely made artworks and grand palatial buildings with an unprecedented aesthetic and a high degree of technical sophistication. In this first in-depth study of these peoples, George Lau situates the Recuay within the great diversification of cultural styles associated with the Early Intermediate Period, provides new and significant evidence to evaluate models of social complexity, and offers fresh theories about life, settlement, art, and cosmology in the high Andes. Lau crafts a nuanced social and historical model in order to evaluate the record of Recuay developments as part of a wider Andean prehistory. He analyzes the rise and decline of Recuay groups as well as their special interactions with the Andean landscape. Their coherence was expressed as shared culture, community, and corporate identity, but Lau also reveals its diversity through time and space in order to challenge the monolithic characterizations of Recuay society pervasive in the literature today. Many of the innovations in Recuay culture, revealed for the first time in this landmark volume, left a lasting impact on Andean history and continue to have relevance today. The author highlights the ways that material things intervened in ancient social and political life, rather than being merely passive reflections of historical change, to show that Recuay public art, exchange, technological innovations, warfare, and religion offer key insights into the emergence of social hierarchy and chiefly leadership and the formation, interaction, and later dissolution of large discrete polities. By presenting Recuay artifacts as fundamentally social in the sense of creating and negotiating relations among persons, places, and things, he recognizes in the complexities of the past an enduring order and intelligence that shape the contours of history.

This book offers a new, art-historical interpretation of pre-contact Inca culture and power and includes over sixty color images.
