In this illuminating tour of humanity, Joy Hendry and Simon Underdown reveal the origins of our species, and the fabric of human society, through the discipline of anthropology. Via fascinating case studies and discoveries, they unravel our understanding of human behaviours and beliefs, including how witchcraft has been used to justify misfortune, and debunk old-fashioned ideas about “ race ” based upon the latest genetic research. They even share what our bathroom tells us about our concept of the body – and ourselves. From our evolutionary ancestors, through our rites of passage, to our responses to globalization, Hendry and Underdown provide the essential first step to understanding the world as an anthropologist would – in all its diversity and commonality.

The global village has arrived. Recent census figures show that communities in the United States are more culturally and ethnically diverse than ever before. And you may be just one of many who find it challenging to build relationships with people from backgrounds unlike your own. How do you befriend an international student or a new coworker from a different country? What can you expect when your church building is shared with a congregation from another cultural group? Why are your words and actions sometimes misinterpreted by others? Crosscultural specialist Patty Lane answers these

questions and more. She shows you how to develop hands-on relational skills that build crosscultural friendships. And she provides practical resources to help you navigate multicultural environments with sensitivity and savvy. Filled with vivid stories of real-life situations, her helpful guidebook explains frequently misunderstood aspects of culture, debunks stereotypes and suggests ways to resolve crosscultural conflicts. Above all, Lane demonstrates God's heart for building bridges across cultures and shows how you can reach out to people of every nation, culture and ethnicity. Whether you are actively ministering to people of different cultural backgrounds, traveling to other countries for your business or simply want to make friends across cultural lines, this engaging handbook is a perfect introduction to the journey.

This book covers introductory material related to ethnographic foundations, study design, theory and methods. It is a general text that could be useful for any advanced undergraduate or graduate student looking to familiarize themselves with the step-by-step how-tos of ethnographic inquiry.

Shane is back! The beloved heroine of students and faculty alike returns in this third volume of the acclaimed series, focusing on the basic how-to 's and foundations of ethnographic studies of children and childhoods. The book opens with Shane trying to land a post-doc working in a department of cultural anthropologists studying children and childhood. Rather predictably, Shane initially sees children as nothing more than small adults. But in this book she ' ll be forced to reorient herself, yet again. As usual, she is aided by the spirits of the ancestors, of senior colleagues, of talking guinea pigs and gigantic head lice, and through it all by her esteemed guide, Billy the Literal Kid. This illustrated guide will orient the reader to the fundamental challenges in doing ethnographic research with children. The book begins by briefly exploring the history of research on children, with children, for children and "by" children. Throughout, it is about doing research with children rather than on them, highlighting their participant rather than object nature. Topics covered include: Foundations of child development Defining childhood The history, essential theories and major works in the anthropology of childhood Children ' s culture and popular Kinderculture Ethical concerns and IRBs Foundations of naturalistic inquiry with children Introduction to ethnographic methods with child participants, including detailed guidance in observation and interview methods Practical guidelines for analyzing children ' s artwork and other visual products Addressing the complexities of adult researcher subjectivities and roles This book is intended for the novice ethnographic researcher and student alike with learning at its core and is designed to encourage wider and deeper reading. It is a useful tool for teaching advanced undergraduate and graduate students in Education, Anthropology, Childhood Studies, Nursing, Communications, Media Studies, Art Education, and more, as well as an essential volume for any faculty bookshelf.

In a country famous for having the most CCTVs in the world, how safe are your rights? Six types of execution are practiced in the industrialized world, torture is openly sanctioned by America, and infringements of people ' s civil liberties occur daily. Yet in 2005 only 61% of the British voting public chose to stand up for their rights. Explaining what civil liberties are and why they ' re worth defending, Tom Head shows how you can make a difference.

The New Testament writings are the foundational documents of early Christianity. But to fully understand them we need a broad historical awareness of the wider social, economic, political and religious context that produced them. Exploring the transition from an oral to a written tradition, this fascinating primer depicts the growth of the early church amid the Roman and Hellenistic Empires. Focusing on the composition and content of the Synoptic Gospels – those of Matthew, Mark and Luke – W. R. Telford furnishes the reader with an appreciation of the methods contemporary scholars apply to the Gospels and also offers an assured, in-depth guide to the texts themselves. Broaching difficult questions about the differing accounts of Jesus ' life that the New Testament has left us, this is an invaluable starting point for anyone looking to understand the roots of Christianity.

As the U.S. strives to establish democracy in Iraq and contemplates its own democratic system in the wake of a series of controversial presidential elections, David Beetham offers new insights into democracy. He looks at real examples such as the role of the citizen and how large corporations affect democracy as well as contemplating the future of democracy in the developed and developing worlds.

Ethnographic fieldwork is something which is often presented as mysterious and inexplicable. How do we know certain things after having done fieldwork? Are we sure we know? And what exactly do we know? This book describes ethnographic fieldwork as the gradual accumulation of knowledge about something you don ' t know much about. We start from ignorance and gradually move towards knowledge, on the basis of practices for which we have theoretical and methodological motivations. Jan Blommaert and Dong Jie draw on their own experiences as fieldworkers in explaining the complexities of ethnographic fieldwork as a knowledge trajectory. They do so in an easily accessible way that makes these complexities easier to understand and to handle before, during and after fieldwork.
