This book addresses the topic of linguistic categorization from a novel perspective. While most of the early research has focused on how linguistic systems reflect some pre-existing ways of categorizing experience, the contributions included in this volume seek to understand how linguistic resources of various nature (prosodic cues, affixes, constructions, discourse markers, ...) can be ' put to work ' in order to actively build categories in discourse and in interaction, to achieve social goals. This question is addressed in different ways by researchers from different subfields of linguistics, including psycholinguistics, conversation analysis, linguistic typology and discourse pragmatics, and a major point of innovation is represented in fact by the interdisciplinary nature of the volume and in the systematic search for converging evidence.

Originating in the climbing world, slacklining is the act of balancing along a narrow, flexible piece of webbing that has been anchored between two stable objects. How to Slackline! covers the short history of slacklining and the sport ' s rapid growth since the advent of the Gibbon Trickline, which brought slacklining to enthusiasts outside the climbing community. The book includes detailed methods for building tricklines (low lines used for jumping tricks), longlines (low lines where the goal is to walk as long as possible), and highlines (slacklines rigged high between cliffs using climbing gear). Technique chapters cover the skills needed to practice all types of slacklining. How To Slackline! is the definitive resource on the emerging sport of slacklining, written by Hayley Ashburn, a top expert in the field, and accompanied by Scott Rogers' stunning color photography.
