Explores whether sufficient data exists to examine the temporal and

spatial relationships that existed in terrorist group planning, and if

so, could patterns of preparatory conduct be identified? About one-

half of the terrorists resided, planned, and prepared for terrorism

relatively close to their eventual target. The terrorist groups existed

for 1,205 days from the first planning meeting to the date of the

actual/planned terrorist incident. The planning process for specific

acts began 2-3 months prior to the terrorist incident. This study

examined selected terrorist groups/incidents in the U.S. from

1980-2002. It provides for the potential to identify patterns of

conduct that might lead to intervention prior to the commission of

the actual terrorist incidents. Illustrations.

"A dazzling journey across the sciences and humanities in search of deep laws to unite them." --The Wall Street Journal One of our greatest living scientists--and the winner of two Pulitzer Prizes for *On Human Nature* and *The Ants*--gives us a work of visionary importance that may be the crowning achievement of his career. In *Consilience* (a word that originally meant "jumping together"), Edward O. Wilson renews the Enlightenment's search for a unified theory of knowledge in disciplines that range from physics to biology, the social sciences and the humanities. Using the natural sciences as his model, Wilson forges dramatic links between fields. He explores the chemistry of the mind and the genetic bases of culture. He postulates the biological principles underlying works of art from cave-drawings to *Lolita*. Presenting the latest findings in prose of wonderful clarity and oratorical eloquence, and synthesizing it into a dazzling whole, *Consilience* is science in the path-clearing traditions of Newton, Einstein, and Richard Feynman.
