The long-awaited new edition of NAEYC's book Developmentally Appropriate Practice in Early Childhood Programs is here, fully revised and updated! Since the first edition in 1987, it has been an essential resource for the early childhood education field. Early childhood educators have a professional responsibility to plan and implement intentional, developmentally appropriate learning experiences that promote the social and emotional development, physical development and health, cognitive development, and general learning competencies of each child served. But what is developmentally appropriate practice (DAP)? DAP is a framework designed to promote young children's optimal learning and development through a strengths-based approach to joyful, engaged learning. As educators make decisions to support each child's learning and development, they consider what they know about (1) commonality in children's development and learning, (2) each child as an individual (within the context of their family and community), and (3) everything discernible about the social and cultural contexts for each child, each educator, and the program as a whole. This latest edition of the book is fully revised to underscore the critical role social and cultural contexts play in child development and learning, including new research about implicit bias and teachers' own context and consideration of advances in neuroscience. Educators implement developmentally appropriate practice by recognizing the many assets all young children bring to the early learning program as individuals and as members of families and communities. They also develop an awareness of their own context. Building on each child's strengths, educators design and implement learning settings to help each child achieve their full potential across all domains of development and across all content areas.

Combines research and practice on integrated developmentally appropriate curriculum that helps theorists, researchers, parents, and teachers understand how to match early childhood teaching practices to the integrated manner that young children naturally think and learn.

Combines research and practice on integrated developmentally appropriate curriculum that helps theorists, researchers, parents, and teachers understand how to match early childhood teaching practices to the integrated manner that young children naturally think and learn.

This volume spells out more fully the principles undergirding developmentally appropriate practice and guidelines for making decisions in the classroom for young children.

A comprehensive overview of all the components necessary to run an effective early childhood program as a teacher, this bright new text remains keenly focused on application and skill-building, utilizing several areas of child development—aesthetic, affective, cognitive, language, physical, and social—as the basis for curriculum planning. Includes curriculum areas such as aesthetics, affective, language, physical, social, cognitive (math) and cognitive (science); chapters on child guidance; how to observe and assess children's learning; detailed approaches to planning lessons, days and weeks; circle time activities; creating learning centers both indoors and outside; and projects and themes with sample projects and lesson plan samples throughout. The book promotes several areas of child development—aesthetic, affective, cognitive, language, physical, and social—and incorporates subject matter areas (art, math, literacy, and science) into the developmental domains rather than focusing on the subjects themselves. There are six activity types (exploratory play, guided discovery, problem-solving, discussions, demonstrations, and direct instruction) in every domain presented to the reader, as well. The contents of the book are all closely aligned to the current developmentally appropriate practice (DAP) guidelines. Strongly methods-based in its approach, the book also imparts the “ how to ” of teaching, with many developmentally appropriate examples of ways to teach children ages three to six years of age.

This timely and accessible volume explores how our understanding of research in child development can help cultivate the knowledge, skills, and attitudes children need for informed and thoughtful participation in society by viewing the curriculum through a developmental lens. Biddle and Garcia-Nevarez cover a range of key topics including characteristics of physical, cognitive, and psychosocial development of children; heritable and environmental influences on children ' s developing self; language and literacy development; mathematical cognition; growth mindsets; and evidence-based positive behavioral interventions and supports. The expert team of contributors offers an advanced exploration of developmental science and how this applies to learning and education in order to create inclusive environments that support children with a range of abilities, including those with the most significant medical, intellectual, and developmental delays. Each chapter contains boxes exploring how the topic relates to the themes of "Promoting Social and Emotional Competence Theory," "Research to Practice Connection," "Common Core and Other Standards," and "Social Justice and Diversity," ensuring comprehensive and consistent coverage across the volume. Developmentally Appropriate Curriculum and Instruction will be essential reading for students of child development and education, as well as educators and those in teacher training who are interested in how theory and research can be effectively harnessed to improve children ' s outcomes.
