Although it can be applied to other members of the genus Homo, in common usage the word "human" generally refers to the only extant species—Homo sapiens. The definition of H. sapiens itself is debated. Some paleoanthropologists include fossils that others have allocated to different species, while the majority assign only fossils that align anatomically with the species as it exists today.

The species that you and all other living human beings on this planet belong to is Homo sapiens. During a time of dramatic climate change 300,000 years ago, Homo sapiens evolved in Africa. Like other early humans that were living at this time, they gathered and hunted food, and evolved behaviors that helped them respond to the challenges of survival in unstable environments.

Homo sapiens sapiens, subspecies of Homo sapiens that consists of the only living members of genus Homo. Traditionally, this subspecies designation was used to separate modern humans from more-archaic members of H. sapiens. It is thought to have evolved sometime between 160,000 and 90,000 years ago in Africa.

[Homo sapiens sapiens | Description & Facts | Britannica](#)

The first known brave Homo sapiens souls who ventured out beyond Africa are found at the sites of Skhul and Qafzeh in Israel, where burials have been dated to be older than 100,000 years ago - and perhaps even up to a staggering 130,000 years ago. However, the main wave(s) of modern humans who left Africa decided they needed a bit more preparation time for the wide world beyond, and waited ...

[Homo Sapiens - Ancient History Encyclopedia](#)

Homo sapiens definition, the species of bipedal primates to which modern humans (Homo sapiens sapiens) belong, characterized by a large brain, a nearly vertical forehead, a skeletal build lighter and teeth smaller than earlier humans, and dependence upon language and the creation and utilization of complex tools: the species has existed for about 200,000 years.

Major fossil sites of early Homo sapiens. Fossils of the earliest members of our species, archaic Homo sapiens, have all been found in Africa. Fossils of modern Homo sapiens have been found in Africa and in many other sites across much of the world. Sites older than 150k include Florisbad, Omo-Kibish, Ngoloba and Herto. Sites dating to about 100k include Klasies River Mouth, Border Cave, Skhul ...

Homo sapiens - modern humans - The Australian Museum

Homosapien was a super-sad event upon its release in 1981. Buzzcocks fans were aware that the songs were originally intended for the band's fourth LP (even though some, such as the underground hit title track, had been composed before the band began) -- a new work that was set to continue the intriguing, strange, yet powerful and incredible direction the group had taken on side two of late ...

Pete Shelley - Homosapien Lyrics | Genius Lyrics

Homo sapiens (Latin: "wise man") is the scientific name for the human species.. Homo is the human genus. H. sapiens is the only surviving species of the genus Homo.. Modern humans are sometimes called "anatomically modern humans". Homo sapiens considers itself the most influential species on the planet. However, many kinds of life, especially plants and protists, have had a much greater effect ...

An Amazon Best Book of the Month for February 2015: Yuval Noah Harari has some questions. Among the biggest: How did Homo sapiens (or Homo sapiens sapiens, if you're feeling especially wise today) evolve from an unexceptional savannah-dwelling primate to become the dominant force on the planet, emerging as the lone survivor out of six distinct, competing hominid species?

Amazon.com: Sapiens: A Brief History of Humankind ...

"It's Hard Enough Knowing" rounds out this post-punk masterpiece. Also not to be missed is Shelley's schizophrenic in-your-face cover of Steppenwolf's The Pusher ie; "Pusher Man". Pete Shelley's Homosapien is the pure definition of what the Reagan/Thatcher era sounded like, and a brilliant observation of the 80's "ME" generation values.

(Animals) the specific name of modern man; the only extant species of the genus Homo. This species also includes extinct types of primitive man such as Cro-Magnon man.

Now a major motion picture: Love, Simon, starring Nick Robinson and Katherine Langford! William C. Morris Award Winner: Best Young Adult Debut of the Year * National Book Award Longlist "A remarkable gift of a novel."—Andrew Smith, author of Grasshopper Jungle "I am so in love with this book."—Nina LaCour, author of Hold Still "Feels timelessly, effortlessly now."—Tim Federle, author of Better Nate Than Ever "The best kind of love story."—Alex Sanchez, Lambda Award-winning author of Rainbow Boys and Boyfriends with Girlfriends Sixteen-year-old and not-so-openly gay Simon Spier prefers to save his drama for the school musical. But when an email falls into the wrong hands, his secret is at risk of being thrust into the spotlight. Now change-averse Simon has to find a way to step out of his comfort zone before he's pushed out—without alienating his friends, compromising himself, or fumbling a shot at happiness with the most confusing, adorable guy he's never met. Incredibly funny and poignant, this twenty-first-century coming-of-age, coming out story—wrapped in a geek romance—is a knockout of a debut novel by Becky Albertalli.

Patrick and David are friends who run a gay bookstore. Life seems simple enough until the day the gorgeous Homosapien walks in. But Homosapien isn't welcome in their world; he's a professional wrestler, and everything he does is fake. So he can't really be gay, can he, or interested in either one of them? Can they trust a single word he says?

Patrick and David are friends who run a gay bookstore, and life seems simple and safe enough until the day when unexpectedly he walks in - six feet tall, gorgeous and built like a dream. But Homosapien isn't welcome in their world; he's a professional wrestler, and everything he does is fake. So he can't really

be gay, can he, or interested in either one of them? Can they even trust a single word he says...?

Let's read about what Charles Darwin has to say about evolution, but without the big words that will only confuse and bore your little learners. This cool educational book contains pictures and texts that complement each other to give your a solid background on the subject. Of all the books your child could have, this one of those that he/she needs. Grab a copy today!

This book sets out to explain and justify the importance of the family as the central basis of human identity and of social values. Its first chapter provides a synthesis of ethological and sociobiological theories concerning the evolutionary basis of human nurturance. The second chapter considers the cultural dimensions of childhood socialization. On the basis of the first two chapters, the second half of the book discusses the important though threatened functions of the family in modern society.

New York Times Bestseller A Summer Reading Pick for President Barack Obama, Bill Gates, and Mark Zuckerberg From a renowned historian comes a groundbreaking narrative of humanity's creation and evolution—a #1 international bestseller—that explores the ways in which biology and history have defined us and enhanced our understanding of what it means to be “human.” One hundred thousand years ago, at least six different species of humans inhabited Earth. Yet today there is only one—homo sapiens. What happened to the others? And what may happen to us? Most books about the history of humanity pursue either a historical or a biological approach, but Dr. Yuval Noah Harari breaks the mold with this highly original book that begins about 70,000 years ago with the appearance of modern cognition. From examining the role evolving humans have played in the global ecosystem to charting the rise of empires, *Sapiens* integrates history and science to reconsider accepted narratives, connect past developments with contemporary concerns, and examine specific events within the context of larger ideas. Dr. Harari also compels us to look ahead, because over the last few decades humans have begun to bend laws of natural selection that have governed life for the past four billion years. We are acquiring the ability to design not only the world around us, but also ourselves. Where is this leading us, and what do we want to become? Featuring 27 photographs, 6 maps, and 25 illustrations/diagrams, this provocative and insightful work is sure to spark debate and is essential reading for aficionados of Jared Diamond, James Gleick, Matt Ridley, Robert Wright, and Sharon Moalem.

Where did we come from? Where are we going? Homo sapiens is the most successful, the most widespread and the most influential species ever to walk the Earth. In the blink of an evolutionary eye we have spread around the globe, taken control of Earth's biological and mineral resources, transformed the environment, discovered the secrets of the universe and travelled into space. Yet just 7 million years ago, we were just another species of great ape making a quiet living in the forests of East Africa. We do not know exactly what this ancestor was like, but it was no more likely than a chimpanzee or gorilla to sail across the ocean, write a symphony, invent a steam engine or ponder the meaning of existence. How did we get from there to here? *Human Origins* recounts the most astonishing evolutionary tale ever told. Discover how our ancestors made the first tentative steps towards becoming human, how we lost our fur but gained language, fire and tools, how we strode out of Africa, invented farming and cities and ultimately created modern civilisation – perhaps the only one of its kind in the universe. Meet your long-lost ancestors, the other humans who once shared the planet with us, and learn where the story might end. ABOUT THE SERIES New Scientist Instant Expert books are definitive and accessible entry points to the most important subjects in science; subjects that challenge, attract debate, invite controversy and engage the most enquiring minds. Designed for curious readers who want to know how things work and why, the Instant Expert series explores the topics that really matter and their impact on individuals, society, and the planet, translating the scientific complexities around us into language that's open to everyone, and putting new ideas and discoveries into perspective and context.

Praise for *How to Rap*: "Filled with real tools and overflowing with inspiration, this comprehensive how-to manual examines the art and craft of rap. . . . Both newcomers to rap and more experienced listeners and artists can gain insights in the time-honored tradition of learning from the past, as told straight from the artists' mouths. . . . Highly recommended." --Library Journal Featuring an array of rap techniques never before explained or cataloged--such as flams, triplets, lazy tails, and vibrato--HOW TO RAP 2 is a must-read for MCs looking to take their craft to the next level, as well as anyone fascinated by rapping and its complexity. Filled with exclusive insights from hip-hop's most innovative artists, such as Tech N9ne, Crooked I, The Pharcyde, Das EFX, Del the Funky Homosapien, and Big Daddy Kane, this book takes you through the intricacies of rhythm, rhyme, and vocal delivery, delving into the art form in unprecedented detail. Paul Edwards is a writer and researcher of hip-hop. He is regarded as a leading expert on hip-hop and rap, and has been referred to as "the Aristotle of hip-hop poetics" by internationally acclaimed and award-winning poet Dana Gioia. He is the author of *How to Rap*. Gift of Gab, of the group Blackalicious, is noted as one of the most dexterous and versatile MCs of all time.

The beloved, award-winning novel is now a major motion picture, *Love, Simon*, starring *13 Reasons Why*'s Katherine Langford and *Everything, Everything*'s Nick Robinson. Sixteen-year-old and not-so-openly gay Simon Spier prefers to save his drama for the school musical. But when an email falls into the wrong hands, his secret is at risk of being thrust into the spotlight. Now Simon is actually being blackmailed: If he doesn't play wingman for class clown Martin, his sexual identity will become everyone's business. Worse, the privacy of Blue, the pen name of the boy he's been emailing with, will be jeopardized. With some messy dynamics emerging in his once tight-knit group of friends and his email

correspondence with Blue growing more flirtatious every day, Simon's junior year has suddenly gotten all kinds of complicated. Now change-averse Simon has to find a way to step out of his comfort zone before he's pushed out-without alienating his friends, compromising himself, or fumbling a shot at happiness with the most confusing, adorable guy he's never met.
