Prize Winners Howard Florey The Man Who

Howard Florey was the brilliant, ambitious and sometimes ruthless Australian who developed penicillin, the first antibiotic, enabling a mastery of disease and death never before imagined in human history. This many-sided man was the first Australian to be President of the Royal Society and when he died in 1968, Sir Robert Menzies said 'in terms of world well-being, Florey.

Howard Florey: The Man Who Made Penicillin by Lennard Bickel
Howard Walter Florey, Baron Florey, OM, FRS, FRCP was an Australian pharmacologist and pathologist who shared the Nobel Prize in Physiology or Medicine in 1945 with Sir Ernst Chain and Sir Alexander Fleming for his role in the development of penicillin.

Penicillin we follow the life of Howard Walter Florey, who worked tirelessly for years with his dedicated team at Oxford to realise the potential of not only penicillin, but also the huge breadth of 'tailor made' antibiotics. Born in Australia, Florey left Adelaide for Oxford on a Rhodes scholarship after graduating in medicine, seeking a career in medical science. In a time when an infection from a thorn scratch could lead to a long and painful death, and meningitis, rheumatic fever, venereal disease and other bacterial infections had meant certain doom, the idea of an antibiotic that could treat all of these afflictions was almost unimaginable. In the aftermath of WW1, when septicaemia and gas gangrene had claimed the lives of so many young men, the need for antibiotics had never been keener. First published in 1972, Florey, the Man Who Made Penicillin tracks Florey's battle with funding, the many set-backs and

Get Free Howard Florey The Man Who Made Penicillin Australian Lives Series

limitations of his equipment and public opinion, and the fascinating journey that led humankind to Penicillin. Whist Fleming got the lion's share of the credit, it was Florey who truly gave the world Penicillin.

Index Includes bibliographical references.

The untold story of the discovery of the first wonder drug, the men who led the way, and how it changed the modern world The discovery of penicillin in 1928 ushered in a new age in medicine. But it took a team of Oxford scientists headed by Howard Florey and Ernst Chain four more years to develop it as the first antibiotic,

Get Free Howard Florey The Man Who Made Penicillin Australian Lives Series

and the most important family of drugs in the twentieth century. At once the world was transformed-major bacterial scourges such as blood poisoning and pneumonia, scarlet fever and diphtheria, gonorrhoea and syphilis were defeated as penicillin helped to foster not only a medical revolution but a sexual one as well. In his wonderfully engaging book, acclaimed author Eric Lax tells the real story behind the discovery and why it took so long to develop the drug. He reveals the reasons why credit for penicillin was misplaced, and why this astonishing achievement garnered a Nobel Prize but no financial rewards for Alexander Fleming, Florey, and his team. *The Mold in Dr. Florey's Coat* is the compelling story of the passage of medicine from one era to the next and of the eccentric individuals whose participation in this extraordinary accomplishment has, until now, remained largely unknown.

Examines the life, personality, and scientific career of Alexander Fleming, depicts his discovery of penicillin, and discusses the development of antibiotics

Penicillin revolutionized healthcare and turned the modest, self-effacing Alexander Fleming into a world hero. This book tells the story of the man and his discovery set against a background of the transformation of medical research from 19th-century individualism through to teamwork and modern-day international big business.

The epic history of how antibiotics were born, saving millions of lives and creating a vast new industry known as Big Pharma. As late as the 1930s, virtually no drug intended for sickness did any

Get Free Howard Florey The Man Who Made Penicillin Australian Lives Series

good; doctors could set bones, deliver babies, and offer palliative care. That all changed in less than a generation with the discovery and development of a new category of medicine known as antibiotics. By 1955, the age-old evolutionary relationship between humans and microbes had been transformed, trivializing once-deadly infections. William Rosen captures this revolution with all its false starts, lucky surprises, and eccentric characters. He explains why, given the complex nature of bacteria—and their ability to rapidly evolve into new forms—the only way to locate and test potential antibiotic strains is by large-scale, systematic, trial-and-error experimentation. Organizing that research needs large, well-funded organizations and businesses, and so our entire scientific-industrial complex, built around the pharmaceutical company, was born. Timely, engrossing, and eye-opening, *Miracle Cure* is a must-

read science narrative—a drama of enormous range, combining science, technology, politics, and economics to illuminate the reasons behind one of the most dramatic changes in humanity's relationship with nature since the invention of agriculture ten thousand years ago.

Creator of the famous Obedience Experiments and originator of the “six degrees of separation” theory, Stanley Milgram transformed our understanding of human nature and continues to be one of the most important figures in psychology and beyond. In this sparkling biography, Thomas Blass captures the colorful personality and pioneering work of a visionary scientist who revealed the hidden workings of our social world. In this new paperback edition, he includes an afterword connecting Milgram's theories to torture, war

crimes, and Abu Ghraib.

Sir Peter Medawar wasn't only a Nobel prize-winning immunologist but also a writer about science and scientists. This entertaining selection presents the best of his writing, with a new foreword by Stephen Jay Gould, one of his greatest admirers.

New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.
