The well-known and tested organic chemistry laboratory techniques of the two best-selling organic chemistry lab manuals: INTRODUCTION TO ORGANIC LABORATORY TECHNIQUES: A SMALL SCALE APPROACH and INTRODUCTION TO ORGANIC LABORATORY TECHNIQUES: A MICROSCALE APPROACH, 3/e are now assembled in one textbook. Professors can use any experiments alongside MICROSCALE AND MACROSCALE TECHNIQUES IN THE ORGANIC LABORATORY. Experiments can be selected and assembled from the two Pavia organic chemistry lab manuals, from professors' homegrown labs, or even competing texts. The 375 page, hardcover book serves as a reference for all students of organic chemistry. With clearly written prose and accurately drawn diagrams, students can feel confident setting up and running organic labs.

Organic Spectroscopy presents the derivation of structural information from UV, IR, Raman,  $^1\text{H}$  NMR,  $^{13}\text{C}$  NMR, Mass and ESR spectral data in such a way that stimulates interest of students and researchers alike. The application of spectroscopy for structure determination and analysis has seen phenomenal growth and is now an integral part of Organic Chemistry courses. This book provides: -A logical, comprehensive, lucid and accurate presentation, thus making it easy to understand even through self-study; -Theoretical aspects of spectral techniques necessary for the interpretation of spectra; -Salient features of instrumentation involved in spectroscopic methods; -Useful spectral data in the form of tables, charts and figures; -Examples of spectra to familiarize the reader; -Many varied problems to help build competence and confidence; -A separate chapter on 'spectroscopic solutions of structural problems' to emphasize the utility of spectroscopy. Organic Spectroscopy is an invaluable reference for the interpretation of various spectra. It can be used as a basic text for undergraduate and postgraduate students of spectroscopy as well as a practical resource by research chemists. The book will be of interest to chemists and analysts in academia and industry, especially those engaged in the synthesis and analysis of organic compounds including drugs, drug intermediates, agrochemicals, polymers and dyes.
