An expert team of clinicians have compiled this comprehensive textbook on intraoperative irradiation for those utilizing either intraoperative electrons or brachytherapy. Issues of basic science and physics are covered in addition to techniques indications and results by disease states. Leading authorities specifically discuss the use of these techniques on specific organs or systems including the lungs, pancreas, bones, head and neck and gastric system. Specific chapters are included for the use of intraoperative irradiation in paediatric surgery. Three world leaders in intraoperative electron irradiation and a prominent brachytherapy expert have created this important text for radiation oncologists, surgeons, physicists and medical oncologists utilizing various types of intraoperative irradiation.

Patient engagement should be envisaged as a key priority today to innovate healthcare services delivery and to make it more effective and sustainable. The experience of engagement is a key qualifier of the exchange between the demand (i.e. citizens/patients) and the supply process of healthcare services. To understand and detect the strategic levers that sustain a good quality of patients' engagement may thus allow not only to improve clinical outcomes, but also to increase patients' satisfaction and to reduce the organizational costs of the delivery of services. By assuming a relational marketing perspective, the book offers practical insights about the developmental process of patients' engagement, by suggesting concrete tools for assessing the levels of patients' engagement and strategies to sustain it. Crucial resources to implement these strategies are also the new technologies that should be (1) implemented according to precise guidelines and (2) designed according to a user-centered design process. Furthermore, the book describes possible fields of patients' engagement application by describing the best practices and experiences matured in different fields

This book describes the development of systems of magnetic resonance imaging using the higher magnetic field strength of 3 tesla, in comparison to the current gold standard of 1.5 tesla. These new systems of MRI make it possible to perform with high spatial, temporal and contrast resolution not only morphological examinations but also functional studies on spectroscopy, diffusion, perfusion, and cortical activation, thus helping research and providing an important tool for routine diagnostic activity. At the same time the new systems offer unparalleled sensitivity and specificity in the numerous conditions of neuroradiological interest.

Music therapy is recognised as being applicable to a wide range of healthcare and social contexts. Since the first edition of Music Therapy: An art beyond words, it has extended into areas of general medicine, mainstream education and community practice. This new edition revises the historical and theoretical perspectives and recognises the growing evidence and research base in contemporary music therapy. Leslie Bunt and Brynjulf Stige document the historical evolution of music therapy and place the practice within seven current perspectives: medical, behavioural, psychoanalytical, humanistic, transpersonal, culture-centred and music-centred. No single perspective, individual or group approach is privileged, although the focus on the use of sounds and music within therapeutic relationships remains central. Four chapters relate to areas of contemporary practice across different stages of the lifespan: child health, adolescent health, adult health and older adult health. All include case narratives and detailed examples underpinned by selected theoretical and research perspectives. The final two chapters of the book reflect on the evolution of the profession as a community resource and the emergence of music therapy as an academic discipline in its own right. A concise introduction to the current practice of music therapy around the world, Music Therapy: An art beyond words is an invaluable resource for professionals in music therapy and music education, those working in the psychological therapies, social work and other caring professions, and students at all levels.

A treatment of the experimental techniques and instrumentation most often used in nuclear and particle physics experiments as well as in various other experiments, providing useful results and formulae, technical know-how and informative details. This second edition has been revised, while sections on Cherenkov radiation and radiation protection have been updated and extended.

This reference provides concise information on the treatment and management of inherited metabolic diseases for the clinician. World experts cover all commonalities of therapy giving practical advice and guidance for daily practice. All established treatment protocols in this quickly developing area of medicine are clearly described, including follow-up protocols and monitoring. Alternative and experimental therapies are also described and evaluated. Numerous tables, figures, and several indices (symptom, disease name, tests, etc.) allow rapid access to specific details. This book is invaluable to anyone dealing with patients with inherited metabolic diseases, pediatricians, internists, neurologists, and clinical geneticists.

This is a book about using the best evidence to inform treatmentdecisions for people with cancer. It is written by oncologists foroncologists, using examples throughout to illustrate key points.The book starts off with a "toolbox" section, written in a waywhich will help those relatively new to the principles ofevidence-based oncology to understand the key issues, and equipthem with the basics of how to tell a good study from a bad one.The majority of the book then deals with an evidence-based summaryof the common and important cancers in a structured and easy toread format around common patient scenarios and frequently askedquestions. Whilst most of the evidence is based on randomisedcontrolled trials, other studies are cited where appropriate egwhen discussing adverse events. The unique accompanying bookwebsite will contain updates of new chapters and studies as theybecome available. Written by leading world figures in the evidence-basedmovement Includes free CD-ROM with PC eBook and sample PDA chapter Methodology of reviewing and appraising evidence discussed inthe context of cancer management Clinical sections covering prevention and screening Chapters on treatment of the individual major cancers reviewthe current best available evidence to most frequently askedquestions Rigorously structured explicit searches, evidence of efficacyand harms, plus comment around clinical scenarios Free-access update website keeping the text current and live:www.evidbasedoncology.com
