Het uitgangspunt van dit boek is dat Chinese individuen van hun eigen inzet uit moeten kunnen gaan, ongeacht de beperkingen die hen door de staat worden opgelegd. Om hun belangen beter te kunnen verdedigen sluiten sommige individuen zich aan bij sociale bewegingen, die tot sociale protesten kunnen leiden.

Connecting Histories: Decolonization and the Cold War in Southeast Asia draws on newly available archival documentation from both Western and Asian countries to explore decolonization, the Cold War, and the establishment of a new international order in post-World War II Southeast Asia. Major historical forces intersected here–of power, politics, economics, and culture–on trajectories East to West, North to South, across the South itself, and along less defined tracks. Especially important, democratic-communist competitions sought the loyalties of Southeast Asian nationalists, even as some colonial powers sought to resume their prewar dominance. These intersections are the focus of the contributions to this book, which use new sources and approaches to examine some of the most important historical trajectories of the twentieth century in Burma, Vietnam, Malaysia, and a number of other countries.

This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets
