Car Design Asia is the third volume in a series on automotive history. Learn how this continent rose to the top in car manufacturing. Starting with Japan in the 1950s, and in later decades Korea and China, Asian automotive technology has gradually become a presence to be reckoned with on the international stage. Initially a smaller player compared to Europe and the United States, Asia's automobile industry has consistently grown to its current status as one of the most dynamic global forces in terms of form and function. At the forefront of both technology and design, Asian cars include some of the most commercially successful automobiles ever built.

This paper describes economic developments in Grenada during the 1990s. The weak growth performance since 1990 reflected largely a continuous contraction in agricultural output, which declined each year from 1989 to 1993. The construction industry experienced a major contraction in 1992 owing to the sharp fall in public investment. In 1993, output declined in the mining and quarrying, construction, and manufacturing sectors as well as in agriculture. In contrast, the hotel and restaurant sector has exhibited strong growth since the late 1980s, with real value added growing by 13.8 percent, on average, each year since 1989.

Game studies is a rapidly developing field across the world, with a growing number of dedicated courses addressing video games and digital play as significant phenomena in contemporary everyday life and media cultures. Seth Giddings looks to fill a gap by focusing on the relationship between the actual and virtual worlds of play in everyday life. He addresses both the continuities and differences between digital play and longer-established modes of play. The 'gameworlds' title indicates both the virtual world designed into the videogame and the wider environments in which play is manifested: social relationships between players; hardware and software; between the virtual worlds of the game and the media universes they extend (e.g. Pokémon, Harry Potter, Lego, Star Wars); and the gameworlds generated by children's imaginations and creativity (through talk and role-play, drawings and outdoor play). The gameworld raises questions about who, and what, is in play. Drawing on recent theoretical work in science and technology studies, games studies and new media studies, a key theme is the material and embodied character of these gameworlds and their components (players' bodies, computer hardware, toys, virtual physics, and the physical environment). Building on detailed small-scale ethnographic case studies, Gameworlds is the first book to explore the nature of play in the virtual worlds of video games and how this play relates to, and crosses over into, everyday play in the actual world.
