Myths Pitfalls And Realities Around Services Procurement ...

How to Avoid the Pitfalls of Starting and Growing Your Business.Thousands of entrepreneurs fail each year because they fall for the common but untrue myths about entrepreneurship. These entrepreneur myths propagate like a virus because no one has taken the time to aggregate, analyze, reflect and filter this valuable information from an entrepreneur and venture capitalist perspective. Entrepreneurs are the key driver of the global economy and entrepreneur success and survival depends on using entrepreneur frameworks that dispel entrepreneur myths and provide competitive advantages. The competitive edge entrepreneurs need to succeed is the knowledge that can only be gained by learning real-life lessons from real-life entrepreneurs and investors. Those lessons aren't learned in any business school. Entrepreneur Myths exposes the reality of the myths that can kill any startup business.As both an entrepreneur and venture capitalist who's been out there in the trenches for 25 years, Damir Perge shares his exciting adventures and the rollercoaster ride of being in the entrepreneurship and venture capital game. He learned what it takes to be an entrepreneur in fabled Silicon Valley and beyond. As a venture capitalist, Perge invested more than \$50 million into over 25 startups. As an entrepreneur, he launched 10+ startups in high-tech, publishing, media, energy and more.Whether you're an existing business, starting your own business, a successful entrepreneur or an aspiring young entrepreneur starting your dream out of your college dorm room, Entrepreneur Myths gives you the education not found in any textbook, MBA program or entrepreneur group. Most of the material is available only to those in the inner circle with money and time to burn. If you want the entrepreneur mindset required to be an entrepreneur you'd better start reading now, and hang on tight for the entrepreneurship ride.Here's a sample of the 50+ myths you must avoid in order to start your own business and be a successful entrepreneur:- Raising capital is easy if you have a great idea- Sweat equity is extremely valuable- Valuation is based on numbers- Dumb money is bad money, and smart money is good money- You need capital to develop a product or service- All it takes is a great idea- Venture capitalists are vultures- Raising big money is harder than small money- Venture capital is the best way to fund your venture- Angels are angelic- VCs are smarter than you- You need capital to develop a product or service- You must have an office- The journey is the reward- You'll be your own boss- You can raise money overnightBONUSIncludes two questionnaires with answers: Are you an entrepreneur? and Should you start your venture? ABOUT THE AUTHORDamir Perge is the founder of entrepreneurdex, a venturcelerator using complexity science to fund and launch startups in the high-tech sector.An entrepreneur and investor, Perge's first venture was formed while he was a member of the Entrepreneur Club at Southern Methodist University (Dallas, Texas). With more than 25 years experience, he's worked with ventures in the technology, internet, media and publishing, entertainment, energy, and manufacturing sectors raising more than \$300 million in capital for various companies and investing more than \$50 million into startup and emerging ventures. He's sat on the boards of 11 companies, served as editor-in-chief of Futuredex, a private equity magazine. Born in Yugoslavia, Perge immigrated to the U.S. in elementary school. He became a U.S. citizen at age 16 and represented the U.S. on the National Soccer Team. He was a McDonald's Soccer All-American and received a full scholarship to play at Southern Methodist University. Perge's hobbies and interests include complexity science, lean and JIT manufacturing, business strategy and business modeling, social technologies, film production, venture capital, mathematics, art and soccer.

Myths Pitfalls And Realities Around Services Procurement ...

First published in 1992. Routledge is an imprint of Taylor & Francis, an informa company.

'A concise guide to early-stage innovation which will be valuable to everyone making the transition from individual scientist or engineer to a role in achieving innovation by an organization.'This transition is often harder than is recognized. The target audience has typically reached the top of an educational ladder, and moves, with a first job, to an organization with different norms, objectives and understanding of innovation. Relevant organizations are wide-ranging, and include companies, governments (local or national), government agencies and educational institutions. The primary purpose of this book is to provide a useful resource for those making the above transition. It may also be of value to people interacting with innovative scientists and technologists from other perspectives, for example from those in funding, commercial or managerial roles.The book has three areas of focus. Firstly, on early-stage innovation, covering the journey from idea to proof-of-concept. Here the factors involved are common across many different areas. Secondly, on the needs of scientists and technologists, and thirdly on innovation by organizations.The contents cover key ideas in innovation, processes for stimulating and managing early-stage innovation, open innovation, and behaviors and communications which support innovation. Conceptual frameworks are described, as well as practical examples. A set of case studies is included, and extensive references are provided. A concluding chapter discusses developments in the management of innovation.The content has been shaped by the author's experience in giving many interactive courses on managing early stage innovation to scientists and engineers, which has given insights into needs; the style is shaped by the author's track record in scientific publications and lecturing. The focus, content and style will make the book more accessible and attractive to the target readership than related books on the market, and will benefit the target readership by enabling them to become more effective in roles involving innovation.

Manufacturing companies including a local micro-enterprise - Quality Postform Ltd are persistently facing competitive pressures as a consequence of customers demanding higher quality products. The emergence of Quality Management has been attributed by many researchers and Quality Gurus including Phil Crosby as a strategic imperative for typical organisations to survive within a highly competitive environment. Nevertheless, research carried out throughout the past years is relatively restricted regarding the practicality of micro-manufacturing firms in implementing Crosby ' s Quality Improvement Programme, which is claimed to be highly beneficial in typical situations. This dissertation seeks to investigate this scenario from both a descriptive and critical perspective towards Quality Postform Ltd. The research provides a critical evaluation of the academic contributions towards the quality management concept. Distinct disputed viewpoints have been identified focusing on Crosby ' s 14-Step Quality Improvement Programme. From one end of the spectrum, supporters uphold that claimed benefits have been acknowledged. Alternatively, others sustain that in essence a Quality Improvement Programme is counter-productive in terms of its application within Small and Medium sized Enterprises. However the researcher has identified four key pre-requisites in order for micro-firms to effectively implement Crosby ' s programme. These include: management commitment, the acknowledgement of a quality problem, the organisation ' s readiness to embrace change together with the suppliers ' readiness to support the quality programme. The methodology applied to assess the presence of these four pre-requisites at QPL was to compile primary, qualitative data through one-to-one / face-to-face interviews with key management officials. This approach is justified due to the absence of formalised documentation and as a result, it is imperative to assess that historical data on Quality Systems is seriously lacking at QPL. The field research outcome reveals that QPL ' s management is experiencing serious doubts regarding the feasibility and practicality of the program ' s implementation within a micro-manufacturing firm. This is the case primarily whenever the latter is facing limited financial and human resource capabilities such as at QPL. The research findings disclose that none of the four pre-requisites are present within this micro-firm. Moreover it confirms the scepticism on the part of [...]

What do you need to do to be valued as an employee, and respected as a manager? Every organization knows that human resources are its greatest asset. To really work well as a team, managers need to think like employees, and employees need to know what management really thinks. But how? This book presents 101 typical workplace situations, distinguishing Myth (perceived wisdom) from Reality (what actually happens on the ground) and describing the best approach to take in each scenario, both for managers and employees. 101 Myths and Realities @ the Office reveals the secrets that are key to optimizing your potential in the workplace.

Anyone working to improve the childbearing experience and help women avoid unnecessary intervention has encountered numerous obstetric myths or old doctors' tales. And while the evidence in the medical literature may be solidly, often unequivocally, against whatever the doctor said, without access to that evidence, the pregnant woman is quite reasonably going to follow her doctor. This book is an attempt to make the medical literature on a variety of key obstetric issues accessible to people who lack the time, expertise, access, or proximity to a medical library to research concerns on their own. This compact, accurate, yet understandable reference is designed for people without medical training and organized for easy access. After an introductory chapter giving basic information about the different types of medical studies, how to evaluate them, and some basic statistical concepts, Goer provides chapters on cesarean issues, pregnancy and labor management, and a review of alternative approaches. Each chapter begins with a stated myth, followed by an examination of the reality. Goer then analyzes the mainstream belief, pointing out its fallacies. Then comes a list of significant points gleaned from the studies and keyed to her abstracts. Next is the outline by which the abstracts are grouped. Finally come the numbered abstracts of relevant articles published, in most cases, after 1980. The book concludes with a glossary of medical terms and an index. This compact, accurate, and understandable reference tool is designed for people without medical training as well as care givers.

Chapters How Human Rights Cross-Pollinate and Take Root: Local Governments & Refugees in Turkey by Elif Durmu and Human Rights Localisation and Individual Agency: From ' Hobby of the Few ' to the Few Behind the Hobby by Tihomir Sabchev, Sara Miellet, and Elif Durmu are available open access under a Creative Commons Attribution 4.0 International License via link.springer.com This book seeks to explore, from a multidisciplinary perspective, whether human rights are, in fact, a myth or a lived reality. Over the years much has been said about their effectiveness or, rather, their ineffectiveness. This perceived ineffectiveness relates not only to institutional challenges at the international level, but also to national implementation mechanisms and processes. In addition, questions have arisen as to whether individuals or groups of individuals actually benefit from the normative guarantees contained in human rights law and whether human rights as legal constructs can be effectively translated into better outcomes. This volume can be distinguished from the existing literature by virtue of the fact that it not only brings together scholars at different stages of their careers, but also that it incorporates contributions that adopt different methodological perspectives and cover a variety of topics. The book should prove of great benefit to human rights researchers, human rights practitioners, NGOs and students. Claire Boost is a PhD Candidate at the Department of Criminal Law and Criminology, Maastricht University. Andrea Broderick is an Assistant Professor at the Department of International and European Law, Maastricht University. Fons Coomans is a Professor at the UNESCO Chair in Human Rights and Peace, Department of International and European Law, Maastricht University. Roland Moerland is an Assistant Professor at the Department of Criminal Law and Criminology, Maastricht University.

Always considered a classic renewable resource, after a hundred thousand years of farming and industry, rivers in many parts of the world are running dry and the groundwater is over pumped. In addition, the rate at which water sources are becoming contaminated with waste from humans, industry, and agriculture is truly alarming. Do these factors add up to a water crisis that merits drastic, large-scale action? Not necessarily say the editors of Water Crisis: Myth or Reality. They challenge this pessimism, concluding that while there are serious global water issues to be considered, the concept of a global water crisis is largely overstated. The book examines the issues and explores which conditions are permanent and unchangeable and which are remediable and changeable. The chapters explore when and where severe regional and local water problems occur and make suggestions about how they may be solved in a deliberate, non-crisis manner. The book covers recent breakthroughs in desalination technologies, the eco-sanitation revolution, international trade in agricultural products, methods of governance and negotiation in water allocation, and pricing and devolution of property rights and the roles they play in solving water issues. The editors, along with a panel of world-renowned experts, suggest that water issues can be solved over the next few decades using new technologies and processes.
