New York Early Intervention Manual

The fundamental challenge that faces early intervention services is to merge the knowledge and insights of scholars and practition- ers with the creative talents of those who design and implement social policy initiatives and to invest the products of this alliance in the future of our chil- dren and thereby in the well-being of our society as a whole.

More than 6.5 million children in the US receive special education services; in any given community, approximately one child out of every six will get speech therapy, go to counseling, attend classes exclusively with other children with disabilities, or receive some other service that allows him or her to learn. This new revised edition is a step-by-step guide to serving children and youth with disabilities as well as the family members, caregivers, and other people involved in their lives. The authors show how staff can enable full use of the library's resources by integrating the methods of educators, medical and psychological therapists, social workers, librarians, parents, and other caregivers. Widening the scope to address the needs of teens as well as preschool and school-age children, this edition also discusses the needs of Spanish-speaking children with disabilities and their families, looking at cultural competency as well as Spanish-language resources. Enhanced with checklists, stories based on real experiences, descriptions of model programs and resources, and an overview of appropriate internet sites and services, this how-to gives thorough consideration to Partnering and collaborating with parents and other professionals Developing special collections and resources Assessing competencies and skills Principles underlying family-centered services and resource-based practices The interrelationship of early intervention, special education, and library service This manual will prove valuable not only to children's services librarians, outreach librarians, and library administrators, but also early intervention and family support professionals, early childhood and special educators, childcare workers, daycare and after school program providers, and policymakers.

This 2000 book provides a comprehensive overview of this complex field by an outstanding group of contributing authors.

This handbook discusses early childhood special education (ECSE), with particular focus on evidence-based practices. Coverage spans core intervention areas in ECSE, such as literacy, motor skills, and social development as well as diverse contexts for services, including speech-language pathology, physical therapy, and pediatrics. Contributors offer strategies for planning, implementing, modifying, and adapting interventions to help young learners extend their benefits into the higher grades. Concluding chapters emphasize the importance of research in driving evidence-based practices (EBP). Topics featured in the Handbook include: Family-centered practices in early childhood intervention. The application of Response to Intervention (RTI) in young children with identified disabilities. Motor skills acquisition for young children with disabilities. Implementing evidence-based practices in ECSE classrooms. Cultural, ethnic, and linguistic implications for ECSE. The Handbook of Early Childhood Special Education is a must-have resource for researchers, professors, upper-level undergraduate and graduate students, clinicians, and practitioners across such disciplines as child and school psychology, early childhood education, clinical social work, speech and physical therapy, developmental psychology, behavior therapy, and public health.

For today's early childhood educator, change is a non-negotiable reality. While the size, force, and direction of change can often seem overwhelming, this book shows the way toward overcoming these gigantic odds or "Goliaths." The New Early Childhood Professional recounts some of the heroic stories and strategic approaches used by early childhood educators who participated in the CAYL Institute Fellowship programs. The authors share a specific framework with concrete steps to help educators become positive change makers in the field of early care and education. Complete with resources, tools, and questions for reflection, this handbook takes readers through four progressive paths toward becoming an architect of change: Analysis, when confronting seemingly insurmountable situations, instead of being overwhelmed, think and reflect about the situation and discover hidden insights; Advance, better understand the nature of problems while also strengthening your vision and identity through planning and preparation; Act, begin with everyday challenges and use what you know from every situation, in every interaction with a child, parent, peer, or administrator; and Accelerate, focus on what you want to change, gather allies, document, and communicate.

A guide to how New York State's Early Intervention Program works.

This handbook synthesizes both contemporary research and best practices in early childhood teacher education, a unique segment of teacher education defined by its focus on child development, the role of the family, and support for all learners. The first volume of its kind, the Handbook of Early Childhood Teacher Education provides comprehensive coverage on key topics in the field, including the history of early childhood teacher education programs, models for preparing early childhood educators, pedagogical approaches to supporting diverse learners, and contemporary influences on this quickly expanding area of study. Appropriate for early childhood teacher educators as well as both pre- and in-service teachers working with children from birth through 8, this handbook articulates the unique features of early childhood teacher education, highlighting the strengths and limitations of current practice as based in empirical research. It concludes by charting future directions for research with an aim to improve the preparation of early childhood educators.

A manual and self-tutorial on the standardized tool for evaluating communication and symbolic abilities of children whose functional communications age is between six months and two years. The test can be administered by a certified speech-language pathologist, early interventionist, psychologist, and other professionals trained to evaluate developmentally young children. No one mentions the earlier, presumably abnormal, edition or editions, and there was some fear that they were locked in a dark closet somewhere to be forgotten. Fortunately it is the test itself rather than the manual that has now been normed. Annotation copyrighted by Book News, Inc., Portland, OR

Handbook of Early Childhood Development Research and Its Impact on Global Policy calls for placing early childhood development at the top of the global policy agenda, enabling children to achieve their full developmental potential and to contribute to equitable economic and social progress worldwide.

Research has shown that a range of adult psychiatric disorders and mental health problems originate at an early age, yet the psychiatric symptoms of an increasing number of children and adolescents are going unrecognized and untreated—there are simply not enough child psychiatric providers to meet this steadily rising demand. It is vital that advanced practice registered nurses (APRNs) and primary care practitioners take active roles in assessing behavioral health presentations and work collaboratively with families and other healthcare professionals to ensure that all children and adolescents receive appropriate treatment. Child and Adolescent Behavioral Health helps APRNs address the mental health needs of this vulnerable population, providing practical guidance on assessment guidelines, intervention and treatment strategies, indications for consultation, collaboration, referral, and more. Now in its second edition, this comprehensive and timely resource has been fully updated to include DSM-5 criteria and the latest guidance on assessing, diagnosing, and treating the most common behavioral health issues facing young people. New and expanded chapters cover topics including eating disorders, bullying and victimization, LGBTQ identity issues, and conducting research with high-risk children and adolescents. Edited and written by a team of accomplished child psychiatric and primary care practitioners, this authoritative volume: Provides state-of-the-art knowledge about specific psychiatric and behavioral health issues in multiple care settings Reviews the clinical manifestation and etiology of behavioral disorders, risk and management issues, and implications for practice, research, and education Offers approaches for interviewing children and adolescents, and strategies for integrating physical and psychiatric screening Discusses special topics such as legal and ethical issues, cultural influences, the needs of immigrant children, and child and adolescent mental health policy Features a new companion website containing clinical case studies to apply concepts from the chapters Designed to specifically address the issues faced by APRNs, Child and Adolescent Behavioral Health is essential reading for nurse practitioners and clinical nurse specialists, particularly those working in family, pediatric, community health, psychiatric, and mental health settings.
