Occupational Therapy Evaluation For Children
The therapy is tailored to a child's specific needs. Before it begins, an occupational therapist (an OT) looks at a child's strengths and challenges, and the tasks that child has trouble with. The OT will then create a program of activities for the child to work on. (Watch an occupational therapist describe the OT evaluation process.)

access to any online entitlements included with the product. *Frames of Reference for Pediatric Occupational Therapy, Fourth Edition*, uses frames of reference for diagnostic categories (neuro-development, social participation, etc.) as effective blueprints for applying theory to pediatric OT practice. Updated with new chapters, case examples, and a new focus on evidence-based practice. This proven approach helps students understand the “why” of each frame of reference before moving on to the “how” of creating effective treatment programs to help pediatric clients lead richer, fuller lives.

Read Book Occupational Therapy Evaluation For Children A Pocket Guide

The book first covers the foundations of frames reference for pediatric OT (Section I), and then covers commonly used frames of reference such as motor skill acquisition, biomechanical, and sensory integration (Section II). A final section discusses newer focused/specific frames of reference like handwriting skills and social participation. A standardized format within each frame of reference chapter covers the same elements (Theoretical Base, Supporting Evidence, the Function/Dysfunction Continuum, Guide to Evaluation, and Application to Practice) to help students build the knowledge and skills
