Home: OIE - World Organisation for Animal Health
The OIE's headquarters are located in Paris, in the 17th arrondissement. It was in 1939 that the OIE moved to the aristocratic district of Parc Monceau, after having occupied premises since 1927 near the Champs de Mars and the Eiffel Tower, that had been provided by the French Higher Public Health Council. In May 1938, the OIE Members gave Dr ...

OECD Study on the Current State of Play of OIE Standards and of the Data Collection Mechanisms that are (or may be) used to gather information on how they are implemented domestically.
This OECD study provides a diagnostic of the current state of play of OIE standards and of the data collection mechanisms that are (or may be) used to gather information on how they are implemented domestically. Based on this diagnostic, the OECD provides recommendations to support the OIE in establishing an Observatory to enhance the use and effectiveness of its standards.

Responding to the request from the 39th Session Codex Alimentarius Commission (CAC) and the ad hoc Codex Intergovernmental Task Force on Antimicrobial Resistance (TFAMR) for information about antimicrobial resistance, this report provides scientific advice on the subject derived from a joint [FAO/WHO expert meeting on foodborne antimicrobial resistance: role of environment, crops and biocides] on 11–15 June 2018 in Rome, Italy. There is clear scientific evidence that foods of plant origin may serve as a vehicle of foodborne exposure to antimicrobial-resistant bacteria. Aquaculture products can also carry bacteria that are resistant to medically important antimicrobials. As such, concerted efforts should be made to mitigate their contamination at all stages of the food chain, from production to consumption. Notably, antimicrobials should only be used in crop production according to label guidelines in the context of integrated pest management strategies. To improve food safety, best management practices should be adhered to with respect to the use of human and animal wastes for soil amendment purposes and for the prevention of environmental contamination where aquatic animals are raised for food. Foods of plant and aquatic animal origin food incorporated in to integrated surveillance plans for antimicrobial resistance (AMR) monitoring. Because of the theoretical potential for disinfecting chemical to co-select for AMR, biocides should be used according to manufacturers' recommendations.

The effective control of animal diseases and zoonoses requires co-ordinated policy action among countries. The World Organisation for Animal Health (OIE), an intergovernmental organisation, offers a comprehensive framework increasing transparency on animal disease status, strengthening national veterinary services, and facilitating safe international trade of live animals and animal products. To achieve these objectives, OIE Members adopt a number of voluntary normative instruments, commonly referred to as OIE's international standards. While the OIE works to support its Members in implementation, Members continue to face challenges in the use of these standards. This OECD study provides a diagnostic of the current state of play of OIE standards and of the data collection mechanisms that are (or may be) used to gather information on how they are implemented domestically. Based on this diagnostic, the OECD provides recommendations to support the OIE in establishing an Observatory to enhance the use and effectiveness of its standards.
