In 1969-1970 they released a trio of powerful tractors: the Oliver 1755, 1855, and 1955. Each one had more horsepower than the next: the claimed PTO power was 86 hp, 92 hp, and 108 hp, respectively. In order to be more efficient in production (and less expensive to the consumer), Oliver designed these three tractors with the same engine: an Oliver-Waukesha 5.1L 6-cylinder diesel engine.

In 1970, to keep up with the Joneses (so to speak), Oliver released the 55-series tractors. They were great tractors, but in order to be more efficient in production, they based the 1755, 1855, and 1955 on the same motor...the Waukesha 310. In theory, one size fits all is a great idea. In practice, not so much.

The history of Oliver's tractors from the early days of Hart-Parr to the last 2255 that rolled off

Read Online Oliver 1755 1855 1955 Tractor Service Repair Shop Manual

the production line in 1976.

Focus on companys, including a company history, test results of tractors, and specifications.

Design, production, and service histories of our most popular subjects combined with top-notch color photograph.

James Oliver sold his first "chilled" plow in 1870--"chilled" because the cast iron was cooled quickly with water to harden the metal and strengthen the plow. And when Oliver Chilled Plow Works merged with the Hart-Parr Company in 1929, the might of capital, expertise, and engineering resources came together to create one of the most successful and revered small tractor manufacturers of all time. This book follows the Oliver tractor from its inception through its development over the years, until the last model rolled off the assembly line in 1976. A story of entrepreneurship and industry, of machinery and American know-how, this illustrated history captures the spirit of Oliver farm equipment as its tractors and crawlers, hay balers and threshers turned American farmland to gold. Throughout, brilliant color photographs and historical images bring the story of the Oliver tractor vividly and vibrantly to life.
