understanding of chemistry fundamentals.

This textbook focuses specifically on the combined topics of irrigation and drainage engineering. It emphasizes both basic concepts and practical applications of the latest technologies available. The design of irrigation, pumping, and drainage systems using Excel and Visual Basic for Applications programs are explained for both graduate and undergraduate students and practicing engineers. The book emphasizes environmental protection, economics, and engineering design processes. It includes detailed chapters on irrigation economics, soils, reference evapotranspiration, crop evapotranspiration, pipe flow, pumps, open-channel flow, groundwater, center pivots, turf and landscape, drip, orchards, wheel lines, hand lines, surfaces, greenhouse hydroponics, soil water movement, drainage systems design, drainage and wetlands contaminant fate and transport. It contains summaries, homework problems, and color photos. The book draws from the fields of fluid mechanics, soil physics, hydrology, soil chemistry, economics, and plant sciences to present a broad interdisciplinary view of the fundamental concepts in irrigation and drainage systems design.

This indispensable course text and practitioner resource, now fully revised, has helped tens of thousands of readers implement evidence-based interventions to improve students' academic achievement and behavior in PreK – 12. The volume presents best-practice guidelines and step-by-step procedures for 83 interventions that can easily be implemented by teachers and other school-based professionals. It is a go-to book for those working in a multi-tiered systems of support (MTSS) or response-to-intervention (RTI)
