Humans have always sought ecstatic experiences - moments where they go beyond their ordinary self and feel connected to something greater than them. Such moments are fundamental to human flourishing, but they can also be dangerous. Beginning around the Enlightenment, western intellectual culture has written off ecstasy as ignorance or delusion. But philosopher Jules Evans argues that this diminishes our reality and denies

us the healing, connection and meaning that ecstasy can bring. He sets out to discover how people find ecstasy in a post-religious culture, how it can be good for us, and also harmful. Along the way, he explores the growing science of ecstasy, to help the reader - and himself - learn the art of losing control. Jules' exploration of ecstasy is an intellectual and emotional odyssey balancing personal experience, interviews and readings from ancient and modern philosophers that will change the way you think about how you feel. "I've been a philosopher for all my adult life and the three most profound books of

philosophy that I have ever read are Ecclesiastes, Job, and Song of Songs." These are the opening lines of Kreeft's Three Philosophies of Life. He reflects that there are ultimately only three philosophies of life and each one is represented by one of these books of the Bible—life is vanity; life is suffering; life is love. In these three books Kreeft shows how we have Dante's great epic The Divine Comedy played out, from Hell to Purgatory to Heaven. But it is an epic played out in our hearts and lives, here and now. Just as there is movement in Dante's epic, so there is movement in these books,

from Ecclesiastes to Job, from Job to Song of Songs. Love is the final answer to Ecclesiastes' quest, the alternative to vanity, and the true meaning of life. Finally, Kreeft sees in these books the epitome of theological virtues of faith, hope and love and "an essential summary of the spiritual history of the world."

state, providing a basis for exploring several general-interest topics: the origin of life, extraterrestrial life, intelligence, and the possibility that humans are unique. The ideas we proposed in *About Life* were intended as starting-points for debate - we did not claim them as 'truth' - but the information on which they were based is currently accepted as 'scientific fact'. What does that mean? What is 'scientific fact' and why is it accepted? What is science - and is biology like other sciences such as physics (except in subject matter)? The book you are now reading investigates these questions -
