and S.Ya.Khorshev. The Russian edition of that book appeared under the same title in 1989 and covered literature data up to the middle of 1986. Since that time the number of publications on this subject increased significantly. In this volume we include all the data published up to the end of 1990, as well as some of the most important relevant articles of 1991. Therefore, this book should be considered as a new book, devoted to the same problems, rather than as just a translation of the mentioned issue. This book deals with compounds of scandium, yttrium, lanthanum

and lanthanoids containing direct metal-carbon bond, i.e. with the real organometallic complexes of these metals. Besides, the volume includes the rare earth complexes, in which organic ligand is bonded to the metal atom via the atom of another element of the Periodic Table. In other words, the book includes all classes of rare earth organoderivatives. Carboxylates,  $\beta$ -diketonates and related chelates are the exceptions, because their properties are closer to inorganic compounds and they were fully described elsewhere. It should be noted, that "rare earth

elements", "rare earth metals", "lanthanoids" and related terms are used in this book for indicating scandium, yttrium, lanthanum and the following 14 elements of the Periodic Table.

Each chapter of this volume is a contribution from an expert in the field, chosen by the editors to contribute to the 1997 "Current Issues in Blood Substitute Research and Development" course given in San Diego, March 17-19. The contributors were selected because of their expertise in areas which the

editors believe to be critical to the advancement of the field, and which reflect activity in "hot" areas of relevant research. While there is a continuity in style for the annual course, each year brings changes in emphasis and content. In previous years, we were often not able to provide time for participants to present their views and opinions. Consequently, this year we encouraged discussion after each presentation. These sessions were recorded, transcribed, and are printed with the chapters herein. We believe that the product is very close to the capturing

this year's course in print, and trust readers will enjoy reading the always candid and often provocative remarks from the audience. The price paid for inclusion of the discussion transcriptions was a delay in publication. Each author was allowed to edit his/her discussion section as well as the final version of the chapters prior to publication. The changes are mainly for grammar, and we tried, when possible, not to alter the conversational style of these interchanges.

A premier debate in the present conjuncture of globalization has been the

prospect of 'post nation' and the obsolescence of patriotism at the horizon of transnationalism. In an ethnographically rich and discursively sharp intervention R. K. Jain articulates the contribution that diaspora studies can make to this debate. In this anthropological narrative both nation and trans-nation are 'moving targets'; their positionality shifts and changes according to the geopolitical location of the analyst and the frame of comparison brought to bear on the objects/subjects of study. In Jain's case the locus happens to be India but the discussion in this

book does not foreclose perspectives from 'other' nations. Indeed as his own examples from countries of the Indian Ocean zone, the Asia Pacific region and the Caribbean amply demonstrate the methodology of ethno-cultural relativism built in these diasporic comparisons is the surest guarantee for tracing the juxtaposed dialectic of nation and trans-nation from whichever existential location one begins. The rootedness of this particular discourse in India provides coherence in the nature of a case-study of globalization from a prominent diaspora node of our times. At the same time

it unravels dimensions of Indian social institutions viewed from the vantage point of diaspora. The book, therefore, is an invitation to further multi-disciplinary and multi-sited collaboration in the exploration of globalization, diaspora, nationalism and patriotism as well as transnationalism from diverse perspectives.

The book discusses the principles of basic and innovative nanocarrier-based therapeutic approaches to modulate the progression of the disease. In addition, this book also explores the evolving targeting approaches specific to the cancer site and type. The scope of the book is not limited to targeted drug delivery for various cancers, but also explores the advancements in cancer imaging and diagnostics
