The book is another in Erlbaum's series on Second Language Acquisition Research, several of which have been reviewed previously in TESL-EJ. Stimulated Recall Methodology in Second Language Research consists of five chapters, three appendices, and a wide selection of resources (in addition to references at the back of the book). The three appendices present helpful samples from both data collection and analysis processes.

This study examines the effect of experience and uses stimulated recall to attempt to understand the interactional patterns of two groups of NSs (with greater and lesser experience) interacting with second language (L2) learners outside of the classroom context.

The methodology of introspection, and especially of stimulated recall, is gaining increasing popularity in second language research. This book provides a "how-to" guide for researchers considering using this technique, contextualized within a history of the procedure and a discussion of its strengths and weaknesses. Topics covered in depth include: * research questions for which this methodology is (and is not) well-suited, * preparing for data collection, * transcribing, coding, and analyzing stimulated recall data, and * avoiding common pitfalls in the use of this methodology. By way of demonstration, the authors walk readers, step by step, through several studies in different areas of second language education which have used this technique, including L2 writing, reading, oral interaction, and interlanguage pragmatics. This book is one of several in LEA's Second Language Acquisition Research Series dealing with specific data collection methods or instruments. Each of these monographs addresses the kinds of research questions

for which the method/instrument is best suited, its underlying assumptions, a characterization of the method/instrument and extended description of its use, and problems associated with its use. For more information about these volumes, please visit LEA's Web site at www.erlbaum.com.

Specifically targeted towards the needs of a second language research audience, *Second Language Research: Methodology and Design* addresses basic issues related to research design, providing step-by-step instructions for how to carry out studies. This up-to-date text includes chapters that cover identifying research problems and questions; selecting elicitation measures; dealing with ethical issues related to data gathering; validity and reliability in research; research in second and foreign language classroom contexts; data description and coding; and data analysis. Also included is a chapter on the much needed and rarely addressed topic of writing up SLA research, giving concrete suggestions about preparing for publication. Principles of both qualitative and quantitative research are discussed in the context of design issues. Throughout the book, examples from applied linguistics, second language acquisition, and TESOL are provided. Helpful discussion and data-based skill-building exercises at the end of each chapter promote better understanding of the principles discussed. A glossary outlines the key terms in second language research. *Second Language Research: Methodology and Design* is an ideal textbook for introductory and advanced classes in second language research methods, as well as classes in related areas, for example, TESOL research methods.

"Games are increasingly becoming the focus for research due to their cultural and economic impact on modern society. However, there are many different types of approaches and methods than can be applied to understanding games or those that play games. This book provides an introduction to various game research

methods that are useful to students in all levels of higher education covering both quantitative, qualitative and mixed methods. In addition, approaches using game development for research is described. Each method is described in its own chapter by a researcher with practical experience of applying the method to topic of games. Through this, the book provides an overview of research methods that enable us to better our understanding on games."--Provided by publisher.

This book includes interviews with fourteen internationally-acclaimed leading figures in Second Language Acquisition (SLA), who speak on seminal issues in the field as well as their own contributions to SLA scholarship. As well as covering the contributors' backgrounds and academic achievements, the interviews also delve into their areas of expertise, current theoretical and practical considerations, and contemporary questions, developments and challenges in SLA. The author probes their views on current topics including input and interaction, vocabulary acquisition, teaching pronunciation, writing development, syntactic processing, multilingualism, L1 attrition, complex dynamic systems, processing instruction, instructed second language acquisition, and technology in language teaching. An introduction by the author draws out the key themes and debates in the field today, and highlights areas for future research and further exploration, and a foreword is provided by Rod Ellis. This book will be of interest to students and scholars of Applied Linguistics, Teacher Education and Methodology, and Second and Foreign Language Education.

Addressing a rapidly growing interest in second language research, this hands-on text provides students and researchers with the means to understand and use current methods in psycholinguistics. With a focus on the actual methods, designs, and techniques used in psycholinguistics research as they are applied to second language learners, this book offers the practical guidance readers need to determine which method is the best for what they wish to investigate as well as the tools that will enhance their research. Each methods chapter is written by a leading expert who describes, discusses, and comments on how a method is used and what its strengths and limitations are for second language research. These chapters follow a specific format to ensure cohesion and a predictable structure across all chapters. The chapters also inform the novice researcher on such key issues as ease of use, costs, potential pitfalls, and other related matters, each of which impact decisions that researchers make about the paths they take. With the most reliable information available from experienced researchers, *Research Methods in Second Language Psycholinguistics* is an essential resource for anyone interested in conducting second language research using psycholinguistic methods.

This international handbook offers an in-depth study of the development of primary Technology (or Design and Technology) education worldwide. It is unique in that it focuses on the way in which the building blocks for this subject have been established- providing much needed research and information for those involved with secondary education and beyond to draw on. The inclusion of Technology education into primary curricula has gathered momentum for the last two decades as its importance and relevance to children's lives has been realised by educators. This handbook offers a detailed insight into the many and varied ways in which countries have incorporated the subject into children's primary school experiences, and issues that have arisen during its implementation. The authors all work in the field of primary technology education and have been actively involved in curriculum development and research in their own countries. The first part of the book is devoted to the introduction, the development and implementation of Technology education into the primary curricula of countries worldwide. Reasons for this movement, successes and barriers to development are discussed and speculation about the future of Technology education is reflected upon. The second part of the book relates to issues that have arisen as the subject has grown over the last twenty years, and consideration needs to be given to these if future successes are to be achieved. Classroom practice including designing and ICT, teacher education, enterprise, sustainability and indigenous technology are all reflected upon and support the notion of technology as a valued and valuable part of the primary curriculum This book should be of interest to undergraduate and graduate students, practitioners, researchers, curriculum developers, policy makers and professional development providers who are involved with, and have an interest in, primary technology education worldwide.

Featuring an extensive set of entries covering all aspects of research methodology, ranging from basic to more advanced topics, this is an essential reference for applied linguists everywhere. Explanations of key concepts and techniques are fully cross-referenced and presented in bite-sized chunks, making it easy for users to look up specific terms quickly or have a brief refresher on methodological practices and related issues. Concepts are further illustrated by real-life examples drawn from current linguistics research. This is ideal for undergraduate and postgraduate students studying applied linguistics or TESOL modules.
