This Book is about universal human consciousness, religion, supernatural creativity, and spirituality illustrated with the African. The issues (Based on US tour, 2008) analyzed, and for which solutions are propounded include: A person loses control when a victim of Spiritual, Psychic, Spiritual, and Ritual Abuse. Furthermore, we have no control because a black hole exists in our thoughts about life and existence - not defined from within. My humble contribution for this is the metaphysics of HOMOTHEISM. The paradigm is, Whatsoever one wills shall be fulfilled through the instrumentality of Ebo. Our African or black race, among other races, has special needs that flows from this. Recommended for students: Religion/Ethnic & Tribal, Ethnopsychology, African American/History

This book faces the interdisciplinary challenge of formulating performance-assessing design approaches for networked cyber-physical systems (NCPSs). Its novel distributed multilayer cooperative control deals simultaneously with communication-network and control performance required for the network and application layers of an NCPS respectively. Practically, it distributes the computational burden among different devices, which act cooperatively to achieve NCPS goals. The approach can be applied to NCPSs based on both wired and wireless technologies and so is suitable for future network infrastructures in which different protocols and technologies coexist. The book reports realistic results from performance evaluation of the new approach, when applied in different operative scenarios. Readers of this book will benefit by: learning a general, technology-independent methodology for the design and implementation of cooperative distributed algorithms for flow control at the network layer of an NCPS that gives algorithm-parameter-tuning guidelines for assessing the desired quality of service performance; learning a general methodology for the design and implementation of consensus-based algorithms at the application layer that allows monitoring and control of distributed physical systems and gives algorithm-parameter-tuning guidelines for assessing the desired control system performance; understanding the main network simulators needed to validate the effectiveness of the proposed multilayer control approach in different realistic network operation scenarios; and practising with a cooperative multilayer control project that assesses acceptable NCPS performance in networked monitoring and robot systems, autonomous and queuing networks, and other critical human relief applications. Researchers, graduate students and practitioners working in automation, engineering, sensor networks, mobile robotics and computer networks will find this book instructive. It will also be helpful to network administrators and technicians implementing application-layer and network-layer solutions or installing, configuring or troubleshooting network and control system components of NCPSs.

From enlistment in 1914 to the end of service in 1918, British men's bodies were constructed, conditioned, and controlled in the pursuit of allied victory. *Physical Control, Transformation and Damage in the First World War* considers the physical and psychological impact of conflict on individuals and asks the question of who, in the heart of war, really had control of the soldier's body. As men learned to fight they became fitter, healthier, and physically more agile, yet much of this was quickly undone once they entered the fray and became wounded, died, or harmed their own bodies to escape. Employing a wealth of sources, including personal testimonies, official records, and oral accounts, Simon Harold Walker sheds much-needed light on soldiers' own experiences of World War I as they were forced into martial moulds and then abandoned in the aftermath of combat. In this book, Walker expertly synthesizes military, sociological, and medical history to provide a unique top-down history of individual soldiers' experiences during the Great War, giving a voice to the thousands of missing, mutilated, and muted men who fought for their country. The result is a fascinating exploration of body cultures, power, and the British army.

Avoiding overweight and obesity is the best-established diet-related risk factor for cancer. The proportion of people who are overweight/obese is increasing, and the amount of physical activity is decreasing in most populations, including urban populations in many developing countries. The increasing prevalence of overweight/obesity is presumably due to the increasing availability of highly palatable, high energy foods and an increasing sedentary lifestyle due to mechanisation of both workplace and leisure activities. Overweight/obesity and reduced physical activity increases the risk of cancers in various organs. Maintaining a healthy body weight and regular physical activity is the second most important way to prevent cancer, after tobacco control. The suggestions of possible public health action aimed at tackling these risk factors include education activities to promote balanced diets which are not excessive in energy and broad education and planning to enable and encourage physical activity during work and leisure. The Handbook Volume 6 on Weight Control and Physical Activity contains a full discussion of this topic, together with recommendations for public health action.
