The Renaissance of Letters traces the multiplication of letter-writing practices between the fourteenth and seventeenth centuries in the Italian peninsula and beyond to explore the importance of letters as a crucial document for understanding the Italian Renaissance. This edited collection contains case studies, ranging from the late medieval re-emergence of letter-writing to the mid-seventeenth century, that offer a comprehensive analysis of the different dimensions of late medieval and Renaissance letters-literary, commercial, political, religious, cultural, social, and military-which transformed them into powerful early modern tools. The Renaissance was an era that put letters into the hands of many kinds of people, inspiring them to see reading, writing, receiving, and sending letters as an essential feature of their identity. The authors take a fresh look at the correspondence of some of the most important humanists of the Italian Renaissance, including Niccolò Machiavelli and Isabella d'Este, and consider the use of letters for others such as merchants and physicians. This book is essential reading for scholars and students of Early Modern History and Literature, Renaissance Studies, and Italian Studies. The engagement with essential primary sources renders this book an indispensable tool for those teaching seminars on Renaissance history and literature.

The Italian diaspora throughout the world navigate and negotiate various complex and multidirectional language dynamics. In order to account for the sociolinguistic processes that have taken place, this book provides a detailed observation of these linguistic dynamics from the point of view of the Italian diaspora in Bedford, in the UK. This study on the language behaviour of three generations of Italian residents in Bedford provides empirical data on, and highlights the importance of, the sociolinguistic examination of English in service encounters. What comes to light in most of the cases analysed, is that audience design has a proven influence on the choice of language and repertoire within the speech of the Bedford Italian community. There are not only switches from one language to another, but also style shifts in the linguistic repertoire. Throughout this study, it becomes clear that speakers freely use the two languages available to their speech community, and, thanks to their active and passive repertoire, they apply a range of linguistic resources from both Italian and English. The volume also uncovers some especially interesting traits in 3rd generation speech, involving in particular a rather widespread use of mixed pronunciation. Upon moving past the initial assumption that the adoption of this mixed pronunciation is used to show the younger generation's sense of belonging to the BI community, a quite different reason emerges. Closer analysis reveals that, due to an increasing feeling of 'non-Britishness', this linguistic choice may be linked to a deliberate and conscious attempt on their part not to accommodate to British culture, and in so doing to distance themselves further from it. Preface by David Britain.

Most studies of immigration to the New World have focused on the United States. Samuel L. Baily's eagerly awaited book broadens that perspective through a comparative analysis of Italian immigrants to Buenos Aires and New York City before World War I. It is one of the few works to trace Italians from their villages of origin to different destinations abroad. Baily examines the adjustment of Italians in the two cities, comparing such factors as employment opportunities, skill levels, pace of migration, degree of prejudice, and development of the Italian community. Of the two destinations, Buenos Aires offered Italians more extensive opportunities, and those who elected to move there tended to have the appropriate education or training to succeed. These immigrants, who adjusted more rapidly than their North American counterparts, adopted a long-term strategy of investing savings in their New World home. In New York, in contrast, the immigrants found fewer skilled and white-collar jobs, more competition from previous immigrant groups, greater discrimination, and a less supportive Italian enclave. As a result, rather than put down roots, many sought to earn money as rapidly as possible and send their earnings back to family in Italy. Baily views the migration process as a global phenomenon. Building on his richly documented case studies, the author briefly examines Italian communities in San Francisco, Toronto, and Sao Paulo. He establishes a continuum of immigrant adjustment in urban settings, creating a landmark study in both immigration and comparative history.

Around the mid-sixteenth century, one of the largest Italian heterodox communities developed in Modena: the community of 'Brothers'. At the beginning of the century, a flourishing humanist tradition had inspired protests against the authority of the Church and had led many of the city's prominent figures to sympathize with Luther and the Reformation. Over the following decades, such positions became more extreme: most of the 'Brothers' held radical convictions, ranging from belief in predestination to contestation of the Antichrist pope. In some cases, the 'Brothers' even went so far as to deny the value of baptism. This heterodox community in Modena created a hidden network for the free expression of its reformed faith. Within twenty years, however, the election of Pope Pius V (1566-1572) and the consolidation of the Holy Office led to a harsh campaign to disperse dissenters in the city. Despite the protection of illustrious members of the Roman Catholic hierarchy, the bishops of Modena, and the dukes of Ferrara, the Holy Office succeeded in repressing the community. The history of the 'Brothers' of Modena therefore provides a case study for understanding how the Inquisition influenced the balance of religious Italy, changing the face of the Peninsula forever.

The accusations. The suspicions. The devastating impact. This is the true story of the Devils of the Bassa Modenese--the most notorious Satanic Panic investigation in the history of Italy. In 1997 a six-year-old boy questioned by authorities relayed disturbing stories of abuse. The more he talked, the more people were implicated in his shocking revelations. And he was only the first child to come forward. Within a year, fifteen more children with similar tales were transferred out of the Bassa region of Italy to protected locations. Their parents were accused of belonging to a satanic sect that performed sex rituals under the aegis of beloved local priest Don Giorgio Govoni. With each child's confession, the network of monsters grew. Families were torn apart. Lives were forever destroyed--and some ended--as allegations of kidnapping, torture, sacrifice, and murder escalated beyond comprehension. But what was really happening in the Bassa Modenese? In this gripping account of the Satanic Panic of the 1990s, investigative Journalist Pablo Trincia returns to the scene of the crimes to find the answer. And the truth he uncovers is as terrifying as the lies.

The advent of Internet marked a significant change in how users and customers can be involved in the innovative process. History is rife with examples of how users innovate, but Internet and its associated communication technologies brought radically new means for individuals to interact rapidly and at little cost in communities that spur new innovations. These communities are initiated and governed by people that differ in their motivations for taking part and participate to varying degrees. Such communities are outside the immediate control of companies seeking to develop open innovation strategies aimed at harnessing their work. This book brings together distinguished scholars from different disciplines: economics, organization theory, innovation studies and marketing in order to provide an improved understanding of how technological as well as symbolic value is created and appropriated at the intersection between online communities and firms. Empirical examples are presented from different industries, including software, services and manufacturing. The book offers food for thought for academics and managers to an important phenomenon that challenges many conventional wisdoms for how business can be done. This book was published as a special issue of Industry and Innovation.

From Terra Nullius to Land of Opportunities and Last Frontier, the European dream has constructed and deconstructed Australia to feed its imagination of new societies. At the same time Australia has over the last two centuries forged and re-invented its own liaisons with Europe arguably to carve out its identity. From the arts to social sciences, to society itself, a complex dynamic has grown between the two continents in ways that invite study and discussion. A transnational research group has begun its collective investigation project of which this first volume is the outcome. The book is a substantial multidisciplinary collection of current research and offers critical perspectives on culture, literature and history around themes at the heart of the Imagined Australia project. The essays instigate reflection, discovery and discussion of how reciprocal imagining between Australia and Europe has articulated itself and ways and dimensions in which a relationship between communities, imagined and not, has unfolded.

Stephen L. Dyson examines rural communities as functioning, largely autonomous societies. Dyson traces the major outlines of community development from the end of the war with Hannibal to the early Middle Ages. He shows how local communities responded to changes in the greater Roman society while still retaining their distinctive identity. He examines the "typical" Roman community during the High Empire and explores the life cycle of rural inhabitants, showing how individuals--the aristocrats, the free poor, and the slaves--developed in relation to society as a whole.
