still a business (except when you want to build your own home), the idea is to build enough living spaces and to offer them to prospective clients or leasees at an affordable price. Of course the success of such a goal still lies on income and the general economic outlook, but one thing is for certain: now that the housing crisis is over, more people will look forward getting a place to call their home.

This study presents exploratory work and seeks to identify and evaluate the success and failure factors that could form a guideline

Renovations

for further study and to some extent help professionals to understand some critical aspects that impact project performance concerning construction in India. A total of 55 attributes affecting the performance of construction projects are analysed in terms of their level of influence on four key performance criteria – schedule, cost, quality, and no disputes – using a two-stage questionnaire survey. These attributes are then further analysed, interpreted and evaluated. Based on the critical success factors obtained from the study, a neural

Online Library The Construction Project

network model-based predictive model for project performance has been developed. The performance prediction models have been derived for all four project performance criteria. Further, a hypothesis that 'project success' is influenced by 'success traits' has also been formulated. The hypothesized positive inter-relationships between success traits and project success have been tested using the structural equation modelling technique. Besides supporting the intuition of past researchers in recognizing 'coordination' as a key success factor,

Online Library The Construction Project

this study has revealed that coordination is not an isolated and independent activity, but is a typical management function with an inherent role in all major management activities. Key elements affecting coordination have also been identified and their influence on coordination effort has been studied. Furthermore, the present study has also identified three broad skill groups required of effective project coordinators. The results are validated through case studies of live projects and structured interviews with experts in the field of construction

The construction industry has experienced rapid advancements and improvements during the last decade. Nowadays, and due to the existing high competition in the construction industry, delivering successful projects has become vital for the survival of different project participants' organizations.

--This thesis is concerned about examining the relation between project success and project management success from the perspective of different project participants. Both success

Online Library The Construction Project

terms' definitions, criteria of measurement and critical success factors are presented. Due to the diversity of project participants' interests and concerns, different project participants perceive success and project management success are measured along certain success indicators. Quality, being one of the project management success indicators, has the strongest relation with project success indicators from all project participants' perspectives. Project participants included in this study are

Online Library The Construction Project

owner, developer, success
consultant, contractor, end
user, facility manager,
general public and end
user. --Quality survives the
expiry of the project phase
and become the measure on
which the project is
considered successful or
not. This measurement is
done by the end user who is
the ultimate judge on
quality. In order to ensure
"the expected" quality level
at the end of the
construction phase, quality
should be incorporated into
all decision taken from the
early stages of the project
till the operation phase of
the facility. --This thesis
provides guidelines for the

Online Library The Construction Project

owner that, if followed, ensure greater probability of project success from the perspective of all project participants and definite success from the perspective of the end user. The owner should be aware to access quality level throughout the different project phases and make sure that all project participants, including him, are abiding by their roles to achieve a successful project.

The construction industry has for many years been criticized for not developing consistent projects that are on time, within budget and with high

Online Library The Construction Project

quality standard.

Consequently, the importance of project management has been increased many folds.

The book presents the most critical success factors on which to focus to reduce potential failures in future construction projects.

Identifying critical success factors would assist in taking proactive measure for successful project management of construction projects. The study will benefit the academicians and professionals involved with building projects. The findings will also be useful for effective management of all types of construction projects, thus helping to
