The discipline of linguistics is a perfect example of the limitations of the modern academy. The combination of social taboos that make certain subject matter unfit for general knowledge and discovery, and the ever-narrowing specialization of scientists leaves us with an intellectual institution that can no longer do anything but apply, repair, and justify the dogma of Victorian Cosmology that is the rule all must follow. Linguistics should be one of the most interesting subjects, considering it is the study of our most valuable and revealing cultural asset, language. However, recent publications from the linguistic department for public consumption have been some of the most trivial and boring intellectual expositions that have ever been put between two covers. Using the entire database of science, we look at the acquisition of language and how it forms our cultural perspective on life, including theories of language evolution. We develop the theory of the evolution of language from song, one of the few suppositions that Charles Darwin actually got right. From this basis we move on to the roots of Proto-Indo-European, which we call Bear Tongue. Bear Tongue is essentially the Eurasian language family dimly perceived by one of the greatest linguists of the twentieth century, Joseph Greenberg. From this perspective we can now retell the tribal stories from Iberia to Siberia, showing a common origin and motivation for human science and religion.

The first book to put contemporary affect theory into conversation with early modern studies, this volume demonstrates how questions of affect illuminate issues of cognition, political agency, historiography, and scientific thought in early modern literature and culture. Engaging various historical and theoretical perspectives, the essays in this volume bring affect to bear on early modern representations of bodies, passions, and social relations by exploring: the role of embodiment in political subjectivity and action; the interactions of human and non-human bodies within ecological systems; and the social and physiological dynamics of theatrical experience. Examining the complexly embodied experiences of leisure, sympathy, staged violence, courtiership, envy, suicide, and many other topics, the contributors open up new ways of understanding how Renaissance writers thought about the capacities, pleasures, and vulnerabilities of the human body.

'This is a timely book. Being on modern theories of money - essentially the study of traditions of endogenous money - it is a welcome contribution to current thinking on monetary policy. The modern central bank view on money is that the rate of interest should be manipulated by central banks to achieve an inflation target with the money supply being the "residual". Although money is in effect endogenous, there is no theory that explains its behaviour. Modern Theories of Money is a serious attempt to sharpen existing views on the issue and fill gaps in an admirable manner.' - Philip Arestis, University of Cambridge, UK and Levy Economics Institute, US This book unites diverse heterodox traditions in the study of endogenous money - which until now have been confined to their own academic quarters - and explores their similarities and differences from both sides of the Atlantic. Bringing together perspectives from post-Keynesians, Circuitists and the Dijon School, the book continues the tradition of Keynes's and Kalecki's analysis of a monetary production economy, emphasising the similarities between the various approaches, and expanding the analytical breadth of the theory of endogenous money. The authors open new avenues for monetary research in order to fuel a renewed interest in the nature and role of money in capitalist economies, which is, the authors argue, one of the most controversial, and therefore fascinating, areas of economics.

While the discoveries of modern academia have deconstructed and replaced all of Victorian science in detail we remain addicted to the Darwinian theory of biological evolution. Darwinists bicker with their dialectical counterpart, Creationism, as if nothing else could possibly exist. Is it not past time for us to evolve into the 21st century and reflect the database of modern science, or is this yet another cultural institution that is too big to fail? Letters of Recommendation "I thoroughly enjoy your writing and your play with ideas. Dare I confess that I keep your book on my night table and sample it at the end of the evening to settle my mind for sleep. I am pleased to know you as my former student." Walter J. Freeman III, Department of Molecular and Cell Biology, University of California, Berkeley "Thank you for your most enjoyable MS. Andreas Anter reconstructs Max Weber's theory of the modern state, showing its significance to contemporary political science. He reveals the ambivalence of Weber's political thought: the oscillation between an étatiste position, mainly oriented to the reason of state, and an individualistic one, focussed on the freedom of individuals

Economic theory reached its zenith of analytical power and depth of understanding in the middle of the nineteenth century among John Stuart Mill and his contemporaries. This book explains what took place in the ensuing Marginal Revolution and Keynesian Revolution that left economists less able to understand how economies operate. It explores the false mythology that has obscured the arguments of classical economists, providing a pathway into the theory they developed.

This third edition of Modern Criticism and Theory represents a major expansion on its previous incarnations with some twenty five new pieces or essays included. This expansion has two principal purposes. Firstly, in keeping with the collection's aim to reflect contemporary preoccupations, the reader has expanded forward to include such newly emergent considerations as ecocriticism and post-theory. Secondly, with the aim of presenting as broad an account of modern theory as possible, the reader expands backwards to to take in exemplary pieces by formative writers and thinkers of the late nineteenth and early twentieth centuries such as Marx, Freud and Virginia Woolf. This radical expansion of content is prefaced by a wide-ranging introduction, which provides a rationale for the collection and demonstrates how connections can be made between competing theories and critical schools. The purpose of the collection remains that of introducing the reader to the guiding concepts of contemporary literary and cultural debate. It does so by presenting substantial extracts from seminal thinkers and surrounding them with the contextual materials necessary to a full understanding. Each selection has a headnote, which gives biographical details of the author and provides suggestions for further reading, and footnotes that help explain difficult references. The collection is ordered both historically and thematically and readers are encouraged to draw for themselves connections between essays and theories. Modern Criticism and Theory has long been regarded as a necessary collection. Now revised for the twenty first century it goes further and provides students and the general reader with a wide-ranging survey of the complex landscape of modern theory and a critical assessment of the way we think - and live - in the world today.
