In the years between the world wars, French intellectuals, politicians, and military leaders came to see certain encounters-between human and machine, organic and artificial, national and international culture-as premonitions of a future that was alternately unsettling and utopian. Skyscrapers, airplanes, and gas masks were seen as traces in the present of a future world, its technologies, and its possible transformations. In *Future Tense*, Roxanne Panchasi illuminates both the anxieties and the hopes of a period when many French people-traumatized by what their country had already suffered-seemed determined to anticipate and shape the future.Future Tense, which features many compelling illustrations, depicts experts proposing the prosthetic enhancement of the nation's bodies and homes; architects discussing whether skyscrapers should be banned from Paris; military strategists creating a massive fortification network, the Maginot Line; and French delegates to the League of Nations declaring their opposition to the artificial international language Esperanto.Drawing on a wide range of sources, Panchasi explores representations of the body, the city, and territorial security, as well as changing understandings of a French civilization many believed to be threatened by Americanization. Panchasi makes clear that memories of the past-and even nostalgia for what might be lost in the future-were crucial features of the culture of anticipation that emerged in the interwar period.

Sometimes solving climate change seems impossibly complex, and it is hard to know what changes we all can and should make to help. This book offers hope. Drawing on the latest research, Mark Jaccard shows us how to recognize the absolutely essential actions (decarbonizing electricity and transport) and policies (regulations that phase out coal plants and gasoline vehicles, carbon tariffs). Rather than feeling paralyzed and pursuing ineffective efforts, we can all make a few key changes in our lifestyles to reduce emissions, to contribute to the urgently needed affordable energy transition in developed and developing countries. More importantly, Jaccard shows how to distinguish climate-sincere from insincere politicians and increase the chance of electing and sustaining these leaders in power. In combining the personal and the political, *The Citizen's Guide to Climate Success* offers a clear and simple strategic path to solving the greatest problem of our times. From bestselling author Gabor Maté, the essential resource for understanding the roots and behaviors of addiction—now with an added introduction by the author. Based on Gabor Maté's two decades of experience as a medical doctor and his groundbreaking work with the severely addicted on Vancouver's skid row, In the Realm of Hungry Ghosts radically reenvisionis this much misunderstood field by taking a holistic approach. Dr. Maté presents addiction not as a discrete phenomenon confined to an unfortunate or weak-willed few, but as a continuum that runs throughout (and perhaps underpins) our society; not a medical "condition" distinct from the lives it affects, rather the result of a complex interplay among personal history, emotional, and neurological development, brain chemistry, and the drugs (and behaviors) of addiction. Simplifying a wide array of brain and addiction research findings from around the globe, the book avoids glib self-help remedies, instead promoting a thorough and compassionate self-understanding as the first key to healing and wellness. In the Realm of Hungry Ghosts argues persuasively against contemporary health, social, and criminal justice policies toward addiction and those impacted by it. The mix of personal stories—including the author's candid discussion of his own "high-status" addictive tendencies—and science with positive solutions makes the book equally useful for lay readers and professionals.
